Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

; Sequence 3, Application US/09939209A
; Publication No. US20030113721A1
; GENERAL INFORMATION:
; APPLICANT: LEVITT, PAT R.
; APPLICANT: MIRNICS, KAROLY
; APPLICANT: KODAVALI, MENKATA CHOWDARI
; APPLICANT: NIMGAONKAR, VISHWAJIT L.
; TITLE OF INVENTION: METHODS AND SYSTEMS FOR FACILITATING THE DIAGNOSIS AND TREATMENT (
; TITLE OF INVENTION: SCHIZOPHRENIA
; FILE REFERENCE: 00-539-US
; CURRENT APPLICATION NUMBER: US/09/939,209A
; CURRENT FILING DATE: 2001-08-24
; PRIOR APPLICATION NUMBER: 60/228,021
; PRIOR FILING DATE: 2000-08-24
; NUMBER OF SEQ ID NOS: 8
; SOFTWARE: PatentIn version 3.1
; SEQ ID NO 3
; LENGTH: 20300
; TYPE: DNA
; ORGANISM: Artificial Sequence
; FEATURE:
; NAME/KEY: misc_feature
; OTHER INFORMATION: A genomic sequence containing RGS4 nucleic acid sequence and sequ
; OTHER INFORMATION: ences upstream and downstream to the RGS4 nucleic acid sequence
US-09-939-209A-3

FEATURES Location/Qualifiers

source 1. .620
/organism="Zea mays"
/mol_type="mRNA"
/db_xref="taxon:4577"
/clone_lib="zmrws05"
/note="Samples were collected in Robert E. Sharp's lab (University of Missouri-Columbia) to construct three normalized cDNA libraries. Dark-grown maize seedlings with primary roots 12-20 mm in length were transplanted to high (-0.03 MPa) or low water potential (-1.6 MPa) vermiculite, and harvested at 5 h and 48 h after transplanting. About 1,000 roots were used for each of the low water potential libraries (zmrws05 and zmrws48) while 500 roots were combined from each of the two time points at high water potential (zmrww00). Each root was divided into 4 segments (distances are from the junction of the root apex and root cap): segment 1, 0-3 mm plus the root cap; segment 2, 3-7 mm; segment 3, 7-12 mm; segment 4, 12-20 mm. (For detatils of conditions see (1) with nutrient modifications as in (2)). The three normalized cDNA libraries were constructed in the lab of Hans Bohnert (University of Illinois-UC). Total RNA was extracted by the 'hot Phenol' method (Plant Molecular Biology manual. D5: 1-13, 2nd ed., 1997). This method worked in eliminating carbohydrate material present in the root tips. The integrity of the RNA was verified by denaturing agarose gels and spectrophotometry (ratio A260/280). Poly(A)+mRNA was isolated twice from total RNA using the Oligotex Direct mRNA kit (Qiagen). Poly(A)+ mRNA was converted to double-stranded cDNA and tagged by using modified Oligo(dT) primers. One of 4 sequence tags corresponding to a different segment of the root was added to the 3'-end of the modified Oligo(dT) primers, including a Not1 site and used to reverse transcribe the segment-specific mRNAs into cDNAs. Each library contains all four tags. A suffix (s1, s2, s3, or s4) has been added to each sequence identifier to designate which region of the root (Root_segment_1, 2, 3, or 4) the sequence was found in based on the identification of the tag. A suffix of s0 indicates that the sequence tag, and hence the source segment, could not be identified. The double stranded cDNAs were size-selected (>450 bp). Size selected cDNAs were adaptored with EcoRI adaptors at both ends, and then digested with NotI. The cDNA was directionally cloned into EcoR1-NotI digested pBS II SK(+) phagemid vector (Stratagene) and electroporated into E.coli DH10B. The total number of white colony forming units (cfu) in the primary libraries before amplification was as follows: zmrws05: 3.37 x 106; zmrws48: 4.87 x 106; zmrww00: 3 x 106. The background of empty clones was less than 1%. Inserts ranged from ~0.5kb to >2.5 kb, as determined by PCR. Plasmid DNA from the primary libraries then was converted to single-stranded circles and used as a template for PCR amplification using the T7 and T3 priming sites that flank the cloned cDNA inserts. The purified PCR products, representing the entire cDNA population cloned in each library, were used as a driver for normalization. Hybridization between the single-stranded library and the PCR products was carried out for 44 hours at 30oC. Non-hybridized single-stranded DNA circles were separated from hybridized DNA rendered partially double-stranded and electroporated into DH10B. The total number of clones with insert was: zmrws05: 2.0x107; zmrws48: 4.2x107; zmrww00: 1.1x107. The background of empty clones was less than 2%. Insert size, determined by PCR of the entire library, ranged from 0.5kb to 2.5kb. (1) Sharp R E; Silk W K; Hsiao T C. Growth of the Maize Primary Root at Low Water Potentials I. Spatial Distribution of Expansive Growth. Plant Physiology (Rockville). 87(1). 1988. 50-57. (2) Spollen W G; LeNoble M E; Samuels T D; Bernstein N; Sharp R E. Abscisic acid accumulation maintains maize primary root elongation at low water potentials by restricting ethylene production. Plant Physiology (Rockville). 122(3). March, 2000. 967-976.

                     (University of Missouri-Columbia) to construct three
                     normalized cDNA libraries. Dark-grown maize seedlings with
                     primary roots 12-20 mm in length were transplanted to high
                     (-0.03 MPa) or low water potential (-1.6 MPa) vermiculite,
                     and harvested at 5 h and 48 h after transplanting. About
                     1,000 roots were used for each of the low water potential
                     libraries (zmrws05 and zmrws48) while 500 roots were
                     combined from each of the two time points at high water
                     potential (zmrww00). Each root was divided into 4 segments
                     (distances are from the junction of the root apex and root
                     cap): segment 1, 0-3 mm plus the root cap; segment 2, 3-7
                     mm; segment 3, 7-12 mm; segment 4, 12-20 mm. (For detatils
                     of conditions see (1) with nutrient modifications as in
                     (2)). The three normalized cDNA libraries were constructed
                     in the lab of Hans Bohnert (University of Illinois-UC).
                     Total RNA was extracted by the 'hot Phenol' method (Plant
                     Molecular Biology manual. D5: 1-13, 2nd ed., 1997). This
                     method worked in eliminating carbohydrate material present
                     in the root tips. The integrity of the RNA was verified by
                     denaturing agarose gels and spectrophotometry (ratio
                     A260/280). Poly(A)+mRNA was isolated twice from total RNA
                     using the Oligotex Direct mRNA kit (Qiagen). Poly(A)+ mRNA
                     was converted to double-stranded cDNA and tagged by using
                     modified Oligo(dT) primers. One of 4 sequence tags
                     corresponding to a different segment of the root was added
                     to the 3'-end of the modified Oligo(dT) primers, including
                     a Not1 site and used to reverse transcribe the
                     segment-specific mRNAs into cDNAs. Each library contains
                     all four tags. A suffix (s1, s2, s3, or s4) has been added
                     to each sequence identifier to designate which region of
                     the root (Root_segment_1, 2, 3, or 4) the sequence was
                     found in based on the identification of the tag. A suffix
                     of s0 indicates that the sequence tag, and hence the
                     source segment, could not be identified. The double
                     stranded cDNAs were size-selected (>450 bp). Size selected
                     cDNAs were adaptored with EcoRI adaptors at both ends, and
                     then digested with NotI. The cDNA was directionally cloned
                     into EcoR1-NotI digested pBS II SK(+) phagemid vector
                     (Stratagene) and electroporated into E.coli DH10B. The
                     total number of white colony forming units (cfu) in the
                     primary libraries before amplification was as follows:
                     zmrws05: 3.37 x 106; zmrws48: 4.87 x 106; zmrww00: 3 x
                     106. The background of empty clones was less than 1%.
                     Inserts ranged from ~0.5kb to >2.5 kb, as determined by
                     PCR. Plasmid DNA from the primary libraries then was
                     converted to single-stranded circles and used as a
                     template for PCR amplification using the T7 and T3 priming
                     sites that flank the cloned cDNA inserts. The purified PCR
                     products, representing the entire cDNA population cloned
                     in each library, were used as a driver for normalization.
                     Hybridization between the single-stranded library and the
                     PCR products was carried out for 44 hours at 30oC.
                     Non-hybridized single-stranded DNA circles were separated
                     from hybridized DNA rendered partially double-stranded and
                     electroporated into DH10B. The total number of clones with
                     insert was: zmrws05: 2.0x107; zmrws48: 4.2x107; zmrww00:
                     1.1x107. The background of empty clones was less than 2%.
                     Insert size, determined by PCR of the entire library,
                     ranged from 0.5kb to 2.5kb. (1) Sharp R E; Silk W K; Hsiao

                     /clone_lib="zmrws05"
                     /note="Samples were collected in Robert E. Sharp's lab
                     (University of Missouri-Columbia) to construct three
                     normalized cDNA libraries. Dark-grown maize seedlings with
                     primary roots 12-20 mm in length were transplanted to high
                     (-0.03 MPa) or low water potential (-1.6 MPa) vermiculite,
                     and harvested at 5 h and 48 h after transplanting. About
                     1,000 roots were used for each of the low water potential
                     libraries (zmrws05 and zmrws48) while 500 roots were
                     combined from each of the two time points at high water
                     potential (zmrww00). Each root was divided into 4 segments
                     (distances are from the junction of the root apex and root
                     cap): segment 1, 0-3 mm plus the root cap; segment 2, 3-7
                     mm; segment 3, 7-12 mm; segment 4, 12-20 mm. (For detatils
                     of conditions see (1) with nutrient modifications as in
                     (2)). The three normalized cDNA libraries were constructed
                     in the lab of Hans Bohnert (University of Illinois-UC).
                     Total RNA was extracted by the 'hot Phenol' method (Plant
                     Molecular Biology manual. D5: 1-13, 2nd ed., 1997). This
                     method worked in eliminating carbohydrate material present
                     in the root tips. The integrity of the RNA was verified by
                     denaturing agarose gels and spectrophotometry (ratio
                     A260/280). Poly(A)+mRNA was isolated twice from total RNA
                     using the Oligotex Direct mRNA kit (Qiagen). Poly(A)+ mRNA
                     was converted to double-stranded cDNA and tagged by using
                     modified Oligo(dT) primers. One of 4 sequence tags
                     corresponding to a different segment of the root was added
                     to the 3'-end of the modified Oligo(dT) primers, including
                     a Not1 site and used to reverse transcribe the
                     segment-specific mRNAs into cDNAs. Each library contains
                     all four tags. A suffix (s1, s2, s3, or s4) has been added
                     to each sequence identifier to designate which region of
                     the root (Root_segment_1, 2, 3, or 4) the sequence was
                     found in based on the identification of the tag. A suffix
                     of s0 indicates that the sequence tag, and hence the
                     source segment, could not be identified. The double
                     stranded cDNAs were size-selected (>450 bp). Size selected
                     cDNAs were adaptored with EcoRI adaptors at both ends, and
                     then digested with NotI. The cDNA was directionally cloned
                     into EcoR1-NotI digested pBS II SK(+) phagemid vector
                     (Stratagene) and electroporated into E.coli DH10B. The
                     total number of white colony forming units (cfu) in the
                     primary libraries before amplification was as follows:
                     zmrws05: 3.37 x 106; zmrws48: 4.87 x 106; zmrww00: 3 x
                     106. The background of empty clones was less than 1%.
                     Inserts ranged from ~0.5kb to >2.5 kb, as determined by
                     PCR. Plasmid DNA from the primary libraries then was
                     converted to single-stranded circles and used as a
                     template for PCR amplification using the T7 and T3 priming
```

sites that flank the cloned cDNA inserts. The purified PCR products, representing the entire cDNA population cloned in each library, were used as a driver for normalization. Hybridization between the single-stranded library and the PCR products was carried out for 44 hours at 30oC. Non-hybridized single-stranded DNA circles were separated from hybridized DNA rendered partially double-stranded and electroporated into DH10B. The total number of clones with insert was: zmrws05: 2.0x107; zmrws48: 4.2x107; zmrww00: 1.1x107. The background of empty clones was less than 2%. Insert size, determined by PCR of the entire library, ranged from 0.5kb to 2.5kb. (1) Sharp R E; Silk W K; Hsiao T C. Growth of the Maize Primary Root at Low Water Potentials I. DEFINITION  Danio rerio genomic clone DKEY-109N18, genomic survey sequence.
ACCESSION   BX145650
VERSION     BX145650.1  GI:27977003
KEYWORDS    GSS.
SOURCE      Danio rerio (zebrafish)
  ORGANISM  Danio rerio
            Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;
            Actinopterygii; Neopterygii; Teleostei; Ostariophysi;
            Cypriniformes; Cyprinidae; Danio.
REFERENCE   1  (bases 1 to 668)
  AUTHORS   Humphray,S.J., Huckle,E. and Durham,J.L.
  TITLE     Direct Submission
  JOURNAL   Submitted (27-JAN-2003) The Sanger Institute, Wellcome Trust Genome
            Campus, Hinxton, Cambridgeshire, CB10 1SA, UK. E-mail enquiries:
            humquery@sanger.ac.uk Unpublished
COMMENT     This sequence was generated from the T7 end of BAC 109N18. 109N18
```

```
            is part of the Daniokey BAC Library created by R. Plasterk and N.V.
            Keygene. Further details:

                     /clone_lib="Scarlet Runner Bean Suspensor Region TriplEx2"
                     /note="Organ: Suspensor Region of Globular-Stage Embryos;
                     Vector: TriplEx2; Site_1: SfiIA; Site_2: SfiIB; Suspensor
                     regions were micro-dissected from globular-stage embryos
                     six days after pollination from greenhouse-grown plants
                     [Weterings et al., Plant Cell 13, 2409-2425 (2001)].
                     Double-stranded cDNA was synthesized from suspensor mRNA
                     using the SMART cDNA Library Construction Kit according to
                     the manufacturer (Clontech). The suspensor cDNA fragments
                     were directionally ligated into the SfiI restriction site
                     of the lambda TriplEx2 vector (Clontech), and the
                     recombinant cDNAs were transformed into E. coli XL1-Blue
                     cells (Clontech). Suspensor cDNA plasmids used for
                     directional sequencing were obtained by in vivo excision
                     from the lambda TriplEx2 recombinants in E. coli BM25.8
                     cells (Clontech)."

                     /dev_stage="6-days post-pollination"
                     /clone_lib="Scarlet Runner Bean Suspensor Region TriplEx2"
                     /note="Organ: Suspensor Region of Globular-Stage Embryos;
                     Vector: TriplEx2; Site_1: SfiIA; Site_2: SfiIB; Suspensor
                     regions were micro-dissected from globular-stage embryos
                     six days after pollination from greenhouse-grown plants
                     [Weterings et al., Plant Cell 13, 2409-2425 (2001)].
                     Double-stranded cDNA was synthesized from suspensor mRNA
                     using the SMART cDNA Library Construction Kit according to
                     the manufacturer (Clontech). The suspensor cDNA fragments
                     were directionally ligated into the SfiI restriction site
                     of the lambda TriplEx2 vector (Clontech), and the
                     recombinant cDNAs were transformed into E. coli XL1-Blue
                     cells (Clontech). Suspensor cDNA plasmids used for
                     directional sequencing were obtained by in vivo excision
                     from the lambda TriplEx2 recombinants in E. coli BM25.8
                     cells (Clontech)."

                     /note="Vector: PWD42nv; Purified genomic DNA from M.
                     musculus C57BL/6J (male) was obtained  from the Jackson
                     Laboratory Mouse DNA Resource
                     (http://www.jax.org/resources/documents/dnares/). The DNA
                     was hydrodynamically sheared by repeated passage through a
                     0.005 inch orifice at constant velocity. The sheared DNA
                     was blunt end-repaired with T4 DNA polymerase and T4
                     polynucleotide kinase. Adaptor oligonucleotides were
                     ligated to the blunt ends in high  molar excess. The
```

adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pWD42 (gi|4732114|gb|AF129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli XL10-Gold (Stratagene) cells and selected for ampicillin resistance."

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

PT   Diagnosing, assessing susceptibility and treating schizophrenia, involves
PT   observing regulator of G-protein signaling 4, RGS4 levels in a subject.
XX
PS   Claim 1; Page 20-33; 112pp; English.
XX
CC   This invention relates to a novel method for diagnosing schizophrenia or
CC   determining susceptibility to schizophrenia in a human. The method
CC   comprises obtaining from a patient a DNA sample and detecting variations
CC   in the regulator of G-protein signalling 4 (RGS4) gene. Alternatively,
CC   the method involves measuring RGS4 mRNA or protein levels in a tissue
CC   sample from the patient and determining if there is a reduced level. The
CC   method of the invention is useful for diagnosing and determining
CC   susceptibility to schizophrenia. The invention also comprises a method
CC   that is useful for treating schizophrenia which includes a prophylactic
CC   treatment. The method of genotyping polymorphic variants in the RGS-4
CC   gene is applied to diagnosing pathologies of the schizophrenic spectrum,
CC   such as in particular schizotypy, schizoid individuals, etc. This method
CC   offers the possibility of diagnosing schizophrenia by a biological test
CC   and no longer exclusively by clinical evaluations. The present sequence
CC   represents the genomic DNA encoding the human regulator of G-protein
CC   signalling 4 (RGS4) protein used in the method of the invention. The gene
CC   for the RGS4 protein is located on human chromosome 1q21-22

PT New peptide useful as a marker for the diagnosis of breast cancer.
XX
PS Claim 1; Page 3683-3684; 3695pp; English.
XX
CC The invention relates to human breast cancer expressed polynucleotides
CC (AAL07544-AAL26789) and methods of assessing whether a patient is
CC afflicted with breast cancer by examining the correlation between the
CC expression of certain markers and the cancerous state of breast cells.
CC The polynucleotides and encoded polypeptides are potential markers for
CC detecting, diagnosing, monitoring, characterising treating and
CC potentially preventing breast cancer. The polynucleotides and encoded
CC polypeptides are also useful for isolating compounds with cytostatic
CC activity

PT Novel isolated polypeptide associated with breast cancer, useful for
PT detecting presence of polypeptide in sample, as a marker for breast
PT cancer.
XX
PS Disclosure; SEQ ID NO 13843; 36pp; English.
XX
CC The invention relates to an isolated polypeptide (I) associated with
CC breast cancer which is encoded by a nucleic acid molecule comprising a
CC nucleotide sequence (S1). Further disclosed is an antibody that binds to
CC the polypeptide of the invention. The activity of the polypeptide of the
CC invention may be described as cytostatic. The antibody is useful for
CC detecting the presence of (I) in a sample. Nucleic acid molecules of the
CC invention are useful in the detection of breast tumours. (I) is useful as
CC a marker for breast cancer and in breast cancer therapy. Sequences given
CC in records ACN78851-ACN92934 represent nucleic acid markers associated
CC with breast cancer. Note: The sequence listing does not form part of the
CC specification but may be obtained in electronic format from the USPTO web
CC site at seqdata.uspto.gov/sequence.html?DocID=20030099974

PT Combination for diagnosing, staging, treating, or monitoring the
PT progression of treatment of a vascular disease, e.g. atherosclerosis,
PT comprises several cDNAs that are differentially expressed in activated
PT vascular tissue.
XX
PS Claim 1; Page; 18pp; English.
XX
CC This invention relates to a combination comprising several cDNAs that are
CC differentially expressed in activated vascular tissue. The invention also
CC discloses a high throughput method for detecting differentially expressed
CC cDNAs in a sample. The cDNAs of the invention may have
CC antiarteriosclerotic; cytostatic; cardiant; hypotensive; antidiabetic;
CC gynaecological; vasotropic and cerebroprotective activities and may be
CC used in gene therapy. The cDNAs of the invention may be used in a high-
CC throughput methods for detecting differential expression of one or more
CC cDNAs in a sample, or screening several molecules or compounds to
CC identify a molecule or compound that specifically binds a cDNA of the
CC invention. A protein encoded by the cDNA may be used to screen several
CC molecules or compounds to identify a ligand that specifically binds to
CC the protein, or to produce or purify an antibody to the protein that can
CC be used to detect a protein in a sample or purify a natural or
CC recombinant protein from a sample. The nucleotides may be useful for
CC diagnosing, staging, treating, or monitoring the progression of treatment
CC of a vascular disease, e.g. atherosclerosis, cancer, coronary artery
CC disease, hypertension, diabetes, pre-eclampsia, ischaemia- reperfusion
CC injury, restenosis, or stroke. The cDNAs can also be used for large-scale
CC genetic or gene expression analysis of several new nucleic acid
CC molecules. Antibodies to the proteins encoded by the cDNAs are useful for
CC diagnosing pre-pathologic disorders, and chronic or acute diseases
CC associated with abnormalities in the expression, amount or distribution
CC of the protein. The present sequence represents a cDNA of the invention
CC that is differentially expressed in activated vascular tissue. Note: The
CC sequence data for this patent did not form part of the specification, but
CC was obtained in electronic format directly from USPTO at
CC http.seqdata.uspto.gov/sequence.html?DocID=20020137081

PT Novel isolated cDNAs expressed in adipocyte differentiation useful for
PT treating subject with disorder such as obesity, type II diabetes,
PT lipodystrophy or hyperinsulinemia.
XX
PS Claim 1; SEQ ID NO 6; 105pp; English.
XX
CC The invention relates to an isolated cDNA expressed during adipocyte
CC differentiation. The cDNA is useful for treating a subject with a
CC disorder such as obesity, type II diabetes, lipodystrophy or
CC hyperinsulinaemia. The nucleic acid is useful for a high throughput
CC method of using a cDNA to screen several molecules or compounds to
CC identify a ligand which specifically binds the cDNA which involves
CC combining the nucleic acid with several molecules or compounds under
CC conditions to allow specific binding, and detecting specific binding
CC between each cDNA and at least one molecule or compound, thus identifying
CC a ligand that specifically binds to each cDNA. The several molecules or
CC compounds are chosen from DNA molecules, RNA molecules, peptide nucleic
CC acid molecules, mimetics, peptides, transcription factors, repressors and
CC regulatory proteins. The present sequence represents a human cDNA
CC expressed during adipocyte differentiation.

XX
PS   Claim 1; SEQ ID NO 842; 2686pp; English.
XX
CC   This invention relates to novel, isolated full length human cDNA
CC   molecules and the encoded proteins thereof. Specifically, it refers to
CC   cDNA clones obtained by an oligo-capping method, where none of these
CC   clones are identical to any known human mRNAs. The present invention
CC   describes an immunoassay to identify agonists and antagonists, as well as
CC   antibodies, antisense molecules and siRNAs that can all be used to bind
CC   to and modulate expression of the cDNA molecules. As such, these
CC   molecules are useful for diagnostic markers or therapeutic targets for
CC   the various diseases or morbid states. In particular, they are useful in
CC   gene therapy for treating osteoporosis, neurological disease, Alzheimer's
CC   disease, Parkinson's disease, dementia, short memory and various cancers,
CC   as well as for maintaining equilibrium of sense or motor function, and
CC   for treating emotional reaction, fear response and panic. Accordingly,
CC   they exhibit osteopathic, neuroprotective, nootropic, antiparkinsonian,
CC   cytostatic and tranquiliser activities. This polynucleotide is a full
CC   length human cDNA sequence of the invention. NOTE: This sequence is not
CC   given in the sequence listing of the specification but can be obtained on
CC   CD-ROM from the European Patent Office, Vienna Sub-office.

PT   a protein.
XX
PS   Disclosure; SEQ ID NO 494; 297pp; English.
XX
CC   The invention relates to a method of determining susceptibility of an
CC   individual to joint space narrowing and/or osteophyte development and/or
CC   joint pain comprising identifying whether the individual has at least one
CC   polymorphism in a polynucleotide encoding at least one of the protein
CC   listed in the specification. The methods, composition and agent are
CC   useful for modulating the susceptibility of an individual to joint space
CC   narrowing and/or osteophyte development and/or joint pain that is
CC   associated with a disease, preferably osteoarthritis. The cell line and
CC   the non-human animal are useful for screening for an agent for diagnosing
CC   an individual having susceptibility to joint space narrowing and/or
CC   osteophyte development and/or joint pain. This sequence corresponds to
CC   the polynucleotide encoding a protein listed in the specification. (Note:
CC   The sequence data for this patent did not form part of the printed
CC   specification but was obtained in electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences).

PT   830 Primers useful for synthesizing full length cDNA clones and their use
PT   in genetic manipulation.
XX
PS   Claim 8; SEQ ID NO 3657; 1380pp + Sequence Listing; English.
XX
CC   The invention relates to primers for synthesising full length cDNA
CC   clones. 830 cDNA molecules encoding a human protein have been isolated
CC   and nucleotide sequences of 5'- and 3'-ends of the cDNA molecules have
CC   been determined. Primers for synthesising the full length cDNA are useful
CC   for clarifying the function of the protein encoded by the cDNA. The full
CC   length clones were obtained by construction of full length enriched cDNA
CC   libraries that were synthesised by the oligo-capping method. The primers
CC   enable the production of the full length cDNA easily without any special
CC   methods. The present sequence is a full length human cDNA of the
CC   invention. Note: The sequence data for this patent did not form part of
CC   the printed specification, but was obtained in CD-ROM format directly
CC   from EPO

PT   New oligonucleotide primers (830 cDNAs) useful for synthesizing full
PT   length human cDNAs.
XX
PS   Example 1; SEQ ID NO 3657; 1340pp; English.
XX
CC   This invention relates to a novel primers useful for synthesising full
CC   length cDNA molecules that encode human proteins. Specifically, it refers
CC   to secretory or membrane proteins that are potential therapeutic agents/
CC   target molecules in the field of medicine, and in particular genes
CC   encoding proteins that are associated with signal transduction,
CC   glycoproteins and transcription. The present invention describes a method
CC   for efficiently cloning a full length human cDNA from both the 5' and 3'
CC   ends using the oligo-capping method. This polynucleotide sequence is a
CC   full length human cDNA clone of the invention.

PT Single copy genomic hybridization probes for detecting specific nucleic
PT acid sequences in sample by in situ hybridization useful for detection of
PT acquired or inherited genetic diseases.
XX
PS Example 1; SEQ ID NO 156; 30pp; English.
XX
CC The invention relates to a nucleic acid hybridisation probe comprising a
CC labelled, single copy nucleic acids of at least 50 nucleotides, which
CC will hybridise to a deduced single copy sequence interval in target
CC nucleic acid (TNA) of known sequence. The single copy sequence is deduced
CC by comparing the target nucleic acid (e.g. a disease causing gene) with a
CC collection of high and low complexity repeat sequences as found in the
CC genome of the organism from containing the target nucleic acid. The probe
CC is generated by PCR on the target sequence. The probe is essentially free
CC of blocking nucleic acid sequences which will hybridise to repeat
CC sequences within the genome of which the TNA is a part, and is labelled
CC with a label selected from fluorochrome-responsive labels, fluorochromes,
CC calorimetric chemical, conjugated proteins, antibodies, antigens and
CC their mixtures. The probe is useful in a hybridisation method, where the
CC hybridisation method is from in situ hybridisation, Southern blot, and
CC other methods in which nucleic acid is immobilised, where the method
CC further comprises selecting a single copy nucleic acid which will
CC hybridise to a duplicon or triplicon sequence domain. The probe is useful
CC for determining the existence of previously unknown repeat sequence
CC families in a genome. The method comprises reacting a labelled probe with
CC the genome, causing the probe to hybridise and ascertaining if the probe
CC hybridises to the genome at more than three preferably ten different
CC locations as a determination of new repeat sequence family, where the
CC determining step comprises selecting the single copy sequence from a
CC duplicon or triplicon sequence domain. The probe is useful for
CC determining a chromosome breakpoint and is useful in the fields for
CC cytogenetics and molecular genetics for determining the presence of
CC specific nucleic acid sequences in a sample of eukaryotic origin, e.g.
CC the probes may be used to analyse specific chromosomal locations by in
CC situ hybridisation as a detection of acquired or inherited genetic
CC diseases especially for detection of genetic or neoplastic disorders.
CC Unlike prior art techniques, the probe permits more precise chromosomal
CC breakpoint determinations by in situ hybridisation. The genomic sequence
CC comprising the human HIRA gene (histone cell cycle regulation defective,
CC S. cerevisiae, homologue A) was analysed for single copy sequence
CC intervals for use as probes of the invention. HIRA is located on
CC chromosome 22 as a duplicate, deletions of 1 copy lead to DiGeorge and
CC Velo-Cardio-facial syndromes. The present sequence is a high complexity
CC repeat found within the human genome used to analyse the HIRA gene for
CC repeat regions. Note: The sequence data for this patent did not form part
CC of the printed specification, but was obtained in electronic format
CC directly from USPTO at seqdata.uspto.gov/sequence.html?DocID=20030224356.

PT Novel 2495 cDNA, useful for treating osteoporosis, neurological diseases,
PT Alzheimer's diseases, Parkinson's diseases, dementia and various cancers.

```
XX
PS   Claim 1; SEQ ID NO 1653; 2449pp; English.
XX
CC   The invention relates to 2495 novel polynucleotides (I) and their encoded
CC   polypeptides, sequences hybridizing to these nucleotides, sequences
CC   encoding partial polypeptides and sequences having 70% or 90% identity to
CC   the nucleotide and protein sequences. The nucleotides and polypeptides
CC   are useful as diagnostic markers or therapeutic target for the diseases
CC   or morbid states. They are also useful for treating osteoporosis,
CC   neurological diseases, Alzheimer's diseases, Parkinson's diseases,
CC   dementia and various cancers. This sequence corresponds to a nucleotide
CC   sequence of the invention.

PS   Disclosure; SEQ ID NO 41023; 3071pp + Sequence Listing; English.
XX
CC   AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)
CC   amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
CC   activity, and can be used in gene therapy and vaccine production. (I)
CC   proteins and polynucleotides may be used in the prevention, diagnosis and
CC   treatment of diseases associated with inappropriate (I) expression. For
CC   example, they may be used to treat disorders associated with decreased
CC   expression by rectifying mutations or deletions in a patient's genome
CC   that affect the activity of (I) by expressing inactive proteins or to
CC   supplement the patients own production of (I). Additionally, (I)
CC   polynucleotides may be used to produce the secreted (I), by inserting the
CC   nucleic acids into a host cell and culturing the cell to express the
CC   protein. (I) proteins and polynucleotides may be used to prevent,
CC   diagnose and treat immune/haematopoietic-related diseases, especially
CC   cancers and cancer metastases of haematopoietic-derived cells. AAK64703
CC   to AAK87694 represent human immune/haematopoietic antigen genomic
CC   sequences from the present invention. AAK54942 to AAK54950 and AAM82169
CC   represent sequences used in the exemplification of the present invention

PT   Screening potential therapeutic compounds for cardiac therapeutic
PT   preparations, useful for treating heart failure in a subject, comprises
PT   contacting a sample of cell or tissue with a compound and detecting gene
PT   expression level.
XX
PS   Claim 10; SEQ ID NO 82; 152pp; English.
XX
CC   The invention relates to a method of screening potential therapeutic
CC   compounds for cardiac therapeutic preparations by contacting a sample
CC   comprising a cell or tissue with a potential therapeutic compound and
CC   detecting a level of expression of a gene that codes for a product
CC   encoded by a nucleic acid selected from 98 sequences given in the
CC   specification and its conservative variants, comparing the level of the
CC   expression of the gene to the level of expression of the gene in the
CC   absence of the compound, and identifying a potential therapeutic compound
CC   for use as a cardiac therapeutic preparation if the potential therapeutic
CC   compound affects the level of expression of the gene. The pharmaceutical
CC   composition or active agents (i.e., beta-adrenergic receptor antagonist,
CC   endothelial receptor antagonist, calcium channel antagonist,
```

```
CC   phosphodiesterase inhibitor, or angiotensin converting enzyme inhibitor)
CC   is useful for treating heart failure in a subject. This sequence
CC   represents one of the genes whose expression may be altered by the
CC   compounds detected by the screen of the invention.

XX
PT   Neuregulin-1 associated gene 1 nucleic acids and fragments, useful for
PT   preventing diagnosing and treating schizophrenia.
XX
PS   Disclosure; Page 659; 750pp; English.
XX
CC   This sequence represents a single nucleotide polymorphism (SNP) of the
CC   human neuregulin-1 associated gene 1 (NRG1AG1) of the invention. The
CC   NRG1AG1 gene is also referred to as the human Schizophrenia gene. The
CC   invention also relates to fragments or variants of the gene and the
CC   NRG1AG1 polypeptides they encode. The NRG1AG1 nucleic acids and
CC   polypeptides may be used in the prevention, diagnosis and treatment of
CC   diseases associated with inappropriate NRG1AG1 expression. For example,
CC   they may be used to treat disorders associated with decreased expression
CC   by rectifying mutations or deletions in a patient's genome that affect
CC   the activity of NRG1AG1 by expressing inactive proteins or to supplement
CC   the patients own production of NRG1AG1. Additionally, the gene may be
CC   used to produce NRG1AG1 polypeptides, by inserting the nucleic acids into
CC   a host cell and culturing the cell to express the protein. The gene may
CC   also be used as DNA probes and primers in diagnostic assays to detect and
CC   quantitate the presence of similar nucleic acids in samples, and
CC   therefore which patients may be in need of restorative therapy. The
CC   NRG1AG1 polypeptides may also be used as antigens in the production of
CC   antibodies against NRG1AG1 and in assays to identify modulators of
CC   NRG1AG1 expression and activity. Anti-NRG1AG1 antibodies and antagonists
CC   may also be used to down regulate expression and activity. Anti-NRG1AG1
CC   antibodies may also be used as diagnostic agents for detecting the
CC   presence of NRG1AG1 polypeptides in samples. NRG1AG1 Is associated with
CC   schizophrenia which may be prevented, diagnosed and/or treated by the
CC   above methods

PT   Neuregulin 1 nucleic acids and proteins useful for diagnosing preventing
PT   and treating schizophrenia.
XX
```

PS Disclosure; Page 244; 756pp; English.
XX
CC This sequence represents a single nucleotide polymorphism (SNP) from the
CC human neuregulin 1 gene of the invention. The invention also relates to
CC fragments or variants of the neuregulin 1 gene. The gene and its proteins
CC may be used in the prevention, diagnosis and treatment of diseases
CC associated with inappropriate neuregulin 1 expression, such as
CC schizophrenia. For example they may be used to treat disorders associated
CC with decreased neuregulin 1 expression by rectifying mutations or
CC deletions in a patient's genome that affect the activity of neuregulin 1
CC by expressing inactive proteins or to supplement the patients own
CC production of polypeptides. Additionally, the gene may be used to produce
CC the neuregulin 1 protein, by inserting the nucleic acids into a host cell
CC and culturing the cell to express the protein. The gene and its
CC complementary sequences may also be used as DNA probes in diagnostic
CC assays to detect and quantitate the presence of similar nucleic acids in
CC samples, and therefore which patients may be in need of restorative
CC therapy. The protein may also be used as antigens in the production of
CC antibodies against neuregulin 1 and in assays to identify modulators of
CC neuregulin 1 expression and activity. The antibodies and antagonists may
CC also be used to down regulate expression and activity. The antibodies may
CC also be used as diagnostic agents for detecting the presence of
CC neuregulin 1 in samples

PT Determining whether a subject has, or is at risk of developing, an
PT abnormally low high density lipoprotein-C (HDL-C) level comprises
PT detecting an allelic variant of a polymorphic region from any of a set of
PT 27 genes.
XX
PS Disclosure; SEQ ID NO 47; 37pp; English.
XX
CC The invention relates to determining whether a subject has, or is at risk
CC of developing, an abnormally low high density lipoprotein-C (HDL-C) level
CC comprises determining whether the subject has an allelic variant of a
CC polymorphic region from any of 27 genes (alleles listed in Table 5 of the
CC specification). Also included are determining whether a male subject has,
CC or is at risk of developing, an abnormally low HDL-C level, comprising
CC determining whether the male subject has an allelic variant of a
CC polymorphic region listed in Table 5 which is associated with abnormally
CC low HDL-C levels in males, and determining whether a female subject has,
CC or is at risk of developing, an abnormally low HDL-C level, comprising
CC determining whether the female subject has an allelic variant of a
CC polymorphic region listed in Table 5 which is associated with abnormally
CC low HDL-C levels in females. The allelic variant in determining whether a
CC subject has, or is at risk of developing, an abnormally low HDL-C level
CC is APOA 1 CC, CD14 1 CT, COL5A2 1 GG, EDNRB 1 AG or AA, FABP3 1 CT, GBE1
CC 1 AG or GG, LIPC 5 AA, MTHFR 1 CC, VWF 2 GG, or their complements. The
CC allelic variant in determining whether a male subject has, or is at risk
CC of developing, an abnormally low HDL-C level, LRP1 3 CC or CT, PAI2 4 GG,
CC or PPARG 1 CG, or their complements. The allelic variants are also COL5A2
CC 1 GG, CD14 1 CT or CC, and FABP3 1 CT, in combination, or their
CC complements. The methods are useful for diagnosing (a predisposition to)
CC abnormally low levels of low high density lipoprotein-C (HDL-C) in a
CC subject, The methods are useful in diagnosing (a predisposition to) or
CC prognosticating diseases and disorders associated with abnormal lipid
CC levels such as vascular and metabolic diseases, e.g., coronary artery
CC disease. The present sequence is a human gene containing a SNP (single
CC nucleotide polymorphism associated with low high density lipoprotein-C
CC (HDL-C) levels.

PT 830 Primers useful for synthesizing full length cDNA clones and their use
PT in genetic manipulation.
XX
PS Claim 2; SEQ ID NO 147; 1380pp + Sequence Listing; English.
XX
CC The invention relates to primers for synthesising full length cDNA
CC clones. 830 cDNA molecules encoding a human protein have been isolated
CC and nucleotide sequences of 5'- and 3'-ends of the cDNA molecules have
CC been determined. Primers for synthesising the full length cDNA are useful
CC for clarifying the function of the protein encoded by the cDNA. The full
CC length clones were obtained by construction of full length enriched cDNA
CC libraries that were synthesised by the oligo-capping method. The primers
CC enable the production of the full length cDNA easily without any special
CC methods. The present sequence is the nucleotide sequence of the 5'-end of
CC a cDNA provided in the invention. Note: The sequence data for this patent
CC did not form part of the printed specification, but was obtained in CD-
CC ROM format directly from EPO

PT   830 Primers useful for synthesizing full length cDNA clones and their use
PT   in genetic manipulation.
XX
PS   Example 11; SEQ ID NO 2340; 1380pp + Sequence Listing; English.
XX
CC   The invention relates to primers for synthesising full length cDNA
CC   clones. 830 cDNA molecules encoding a human protein have been isolated
CC   and nucleotide sequences of 5'- and 3'-ends of the cDNA molecules have
CC   been determined. Primers for synthesising the full length cDNA are useful
CC   for clarifying the function of the protein encoded by the cDNA. The full
CC   length clones were obtained by construction of full length enriched cDNA
CC   libraries that were synthesised by the oligo-capping method. The primers
CC   enable the production of the full length cDNA easily without any special
CC   methods. The present sequence was used as the representative sequence
CC   from a human clone which was used in homology searches to identify the
CC   clone. Note: The sequence data for this patent did not form part of the
CC   printed specification, but was obtained in CD-ROM format directly from
CC   EPO

XX
CC   This invention relates to a novel primers useful for synthesising full
CC   length cDNA molecules that encode human proteins. Specifically, it refers
CC   to secretory or membrane proteins that are potential therapeutic agents/
CC   target molecules in the field of medicine, and in particular genes
CC   encoding proteins that are associated with signal transduction,
CC   glycoproteins and transcription. The present invention describes a method
CC   for efficiently cloning a full length human cDNA from both the 5' and 3'
CC   ends using the oligo-capping method. This polynucleotide sequence is the
CC   3' end of a representative human DNA cluster of the invention.

PT   New polynucleotides and polypeptides are useful in gene therapy, for
PT   developing a diagnostic marker or medicines for regulating their
PT   expression and activity, or as a target of gene therapy.
XX
PS   Claim 1; SEQ ID NO 1134; 305pp; English.
XX
CC   The invention relates to a novel human polynucleotide and the encoded
CC   polypeptide. A polynucleotide of the invention may have a use in gene
CC   therapy. An oligonucleotide of the invention ADM06202-ADM06773 is useful
CC   as a primer for synthesizing the polynucleotide or as a probe for
CC   detecting the polynucleotide. The polynucleotides ADM01316-ADM03758 are
CC   useful in gene therapy, for developing a diagnostic marker or medicines
CC   for regulating their expression and activity, or as a target of gene
CC   therapy. The proteins ADM03759-ADM06201 encoded by the polynucleotides
CC   are useful as pharmaceutical agents. The present sequence represents a
CC   cDNA sequence of the invention.

PT   New isolated cancer associated nucleic acids comprising at least 10
PT   contiguous nucleotides, useful for diagnosing, preventing and/or treating
PT   cancers such as leukemia and lymphoma.
XX
PS   Claim 1; SEQ ID NO 801; 199pp; English.
XX
CC   The present invention relates to cancer associated sequences (ADQ97025-
CC   ADQ98004). The sequences are useful for the diagnosis, prevention and/or
CC   treatment of cancer, such as leukemia and lymphoma. Note: The sequence
CC   data for this patent did not form part of the printed specification, but
CC   was obtained in electronic formate directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences.

PT   New tumor-associated antigenic target polypeptides and nucleic acids,
PT   useful in preparing a medicament for treating or detecting a
PT   proliferative disorder, e.g. breast, lung, colorectal, ovarian or
PT   prostate cancer or tumor.
XX
PS   Claim 1; SEQ ID NO 3002; 7273pp; English.
XX
CC   The invention relates to human tumour-associated antigenic target (TAT)
CC   polypeptides, and their related nucleic acids. The TAT polypeptides are
CC   overexpressed in cancer tissues compared to normal tissues, and may thus
CC   serve as effective targets for the diagnosis and treatment of cancer in
CC   mammals. The invention also relates to nucleic acid and polypeptide
CC   sequences at least 80% identical to the TAT nucleic acids and
CC   polypeptides; expression vectors and host cells comprising a TAT nucleic
CC   acid; an antibody specific for a TAT polypeptide; a peptide or organic
CC   molecule which binds to a TAT polypeptide; fusion proteins comprising a
CC   TAT polypeptide; and methods and compositions for the treatment or
CC   diagnosis of cancer in mammals. TAT polypeptides, nucleic acids,
CC   antibodies, antagonists, binding molecules and compositions are useful
CC   for diagnosing or treating a cell proliferative disorder associated with
CC   increased TAT expression, particularly cancers such as breast cancer,
CC   colorectal cancer, lung cancer, ovarian cancer, liver cancer, bladder
CC   cancer, pancreatic cancer, cervical cancer, cancers of the central
CC   nervous system, melanoma and leukaemia. TAT nucleic acids may further be
CC   used as hybridisation probes, in chromosome and gene mapping, in
CC   chromosome identification and in gene therapy. The present sequence
CC   represents a TAT nucleic acid of the invention

PT   New human transporter proteins and nucleic acid molecules, useful for
PT   diagnosing, preventing or treating disorders associated with aberrant
PT   expression of the transporter proteins, or in pharmacogenomic analysis.
XX
PS   Claim 4; SEQ ID NO 3; 59pp; English.
XX
CC   The invention relates to human transporter protein and its corresponding
CC   nucleic acid sequence related to GABA transporter subfamily. The
CC   invention is useful as models for the development of human therapeutic
CC   targets, aids in the identification of therapeutic proteins, serves as
CC   targets for the development of human therapeutic agents that modulate
CC   transporter activity in cells and tissues that express the transporter,
CC   or in pharmacogenomic analysis. The transporter peptide may be used in
CC   substantial and specific assays, in raising antibodies or in eliciting
CC   another immune response, as a reagent in assays designed to
CC   quantitatively determine the levels of the protein in biological fluids,
CC   and as markers for tissues in which the protein is expressed. The nucleic
CC   acid molecules may be used as probes, primers, chemical intermediates and
CC   in biological assays. These may also be used in diagnosing, preventing or
CC   treating disorders associated with human transporter protein, such as
CC   those expressed in foetal heart tissues. The invention is useful in gene
CC   therapy. The present sequence is human transporter gene.

PT New polynucleotide sequences obtained from various cDNA libraries, useful
PT as hybridization probes, as oligomers for PCR, for chromosome and gene
PT mapping, in the recombinant production of protein, or in generating
PT antisense DNA or RNA.
XX
PS Claim 1; SEQ ID NO 17569; 44pp; English.
XX
CC The invention relates to an isolated polynucleotide comprising any one of
CC 38043 cDNA sequences, appearing as ACH12789-ACH50831, whose sequence was
CC determined by the technique of SBH (sequencing by hybridisation). Also
CC included is a purified polypeptide comprising a sequence corresponding to
CC a reading frame of the novel polynucleotide. The nucleic acid sequences
CC are useful in diagnostics as expressed sequence tags (EST) for
CC identifying expressed genes or for physical mapping of the human genome,
CC in forensics, in assessing biodiversities, or in identifying mutations
CC responsible for genetic disorders and other traits. The nucleotide
CC sequences are also useful as hybridisation probes, as oligomers for PCR,
CC for chromosome and gene mapping, in the recombinant production of
CC protein, or in generating antisense DNA or RNA. The purified polypeptide
CC is useful for generating antibodies specific for it. The present sequence
CC is one of the 38043 isolated cDNA/EST sequences. Note: The sequence data
CC for this patent did not form part of the printed specification, but was
CC obtained in electronic format directly from USPTO at
CC seqdata.uspto.gov/sequence.html?DocID=20030073623

XX
CC The present genomic sequence is that of human pituitary adenylate cyclase
CC activating polypeptide (PACAP). This gene is localised to the short arm
CC of chromosome 18p11 and synthesised in the retinal ganglion cells. The
CC genomic DNA is isolated from lymphocytes of individuals. The coding
CC region of the gene has a dinucleotide repeat polymorphism marker known as
CC W3440 and an STS marker, ADCYAP1 is located in the 3'UTR. These markers
CC are useful to map the gene physically and genetically to the chromosome
CC 18. This sequence can be used to design probes for detecting the presence
CC or absence of a mutation in the wild type PACAP gene. It is also useful
CC for genetic diagnosis of neuropsychiatric disorders like bi- polar
CC affective disorder(BP-I) and schizoaffective disorder manic type (SAD-M),
CC which are more valid than current clinical diagnosis based on clinical
CC observation and subjective reports. It is used for identifying compounds
CC that modulate PACAP gene expression which are useful for treatment of
CC PACAP disorders

XX
CC   The invention relates to a novel antisense compound targeted to a nucleic
CC   acid molecule encoding human apolipoprotein B (ApoB) which specifically
CC   hybridises with and inhibits the expression of human apolipoprotein B.
CC   The compound of the invention demonstrates antiarteriosclerotic,
CC   cardiant, antidiabetic and anorectic activities and may be useful for
CC   preparing a composition for treating abnormal lipid or cholesterol
CC   metabolism, atherosclerosis, diabetes Type 2, obesity, hyperlipidaemia or
CC   cardiovascular disease. Furthermore, the compound has gene therapy
CC   applications. The current sequence is that of the human ApoB DNA of the
CC   invention.

PT   Antisense oligonucleotide compound that inhibits expression of mRNA
PT   encoding human apolipoprotein B, useful for treating hyperlipidemia,
PT   diabetes, obesity, von Gierke's disease, lipodystrophies, Cushing's
PT   syndrome.
XX
PS   Example 33; SEQ ID NO 334; 483pp; English.
XX
CC   The invention relates to a novel antisense compound where the compound
CC   hybridises to and inhibits expression of mRNA encoding human
CC   apolipoprotein B (ApoB) after 16-24 hours by at least 30% in 80%
CC   confluent HepG2 cells in culture at a concentration of 150 nM. The
CC   compound of the invention demonstrates cardiovascular,
CC   antiarteriosclerotic, antilipaemic, antidiabetic, anorectic, cardiant,
CC   vasotropic, hypotensive, anabolic, eating disorder-related, cytostatic,
CC   endocrine, vasotropic, neuroprotective and nootropic activities and may
CC   be useful for inhibiting the expression of apolipoprotein B in cells or
CC   tissues in vivo in order to address a condition associated with abnormal
CC   lipid or cholesterol metabolism. The compound may be useful for
CC   decreasing circulating lipoprotein levels, triglyceride levels,
CC   cholesterol levels, lipid levels, fatty acid levels, acute phase
CC   reactants and chylomicrons and thus may be utilised during treatment of
CC   hyperlipoproteinaemia, hyperlipidaemia, hypercholesterolaemia,
CC   cardiovascular disorders, Von Gierke's disease, lipodystrophy, Cushing's
CC   syndrome, sexual ateliotic dwarfism, hyperthyroidism, hypertension,
CC   anorexia nervosa, Werner's syndrome, hepatoma, multiple myeloma, uraemia,
CC   impotence, obstructive liver disease, Alzheimer's disease, dementia,
CC   diabetes, obesity and atherosclerosis. The current sequence is that of
CC   the human apolipoprotein B (ApoB) gDNA - SEQ ID 334 of the invention
CC   which is located at chromosome 2p23-2p24.

PS Disclosure; Page 815-819; 1343pp; English.
XX
CC The present invention describes a new composition comprising an antisense
CC oligonucleotide (ON) with low adenosine (up to 15%), which targets
CC nucleic acids involved in bronchoconstriction, allergies, and/or
CC inflammation. The ON can have antiinflammatory, antiallergic,
CC antiasthmatic, cytostatic and analgesic activities. The compositions are
CC useful for the treatment of diseases associated with inflammation,
CC impaired airways, including lung disease and diseases whose secondary
CC effects afflict the lungs of a subject. They can be used for treating
CC e.g. ischaemic conditions, pulmonary vasoconstriction, allergies, asthma,
CC impeded respiration, respiratory distress syndrome, pain, cystic
CC fibrosis, pulmonary hypertension, emphysema, chronic obstructive
CC pulmonary disease (COPD), and cancers such as leukaemias, lymphomas,
CC carcinomas, and cancers which may metastasise to the lungs, including
CC breast and prostate cancer. The reduction of the adenosine content of the
CC ONs reduces side effects. The A-containing ONs break down with the
CC release of deoxyadenosine which activates adenosine receptors causing
CC bronchoconstriction and inflammation. AAA32313 to AAA35312 represent the
CC nucleotide sequences given in the sequence listing from the present
CC invention, which correspond to SEQ ID NO:1 to 2815, and then the last 185
CC sequences are also called SEQ ID NO:1 to 185, but the sequences differ
CC from the previously named sequences. SEQ ID NO:11 to 1680 (AAA32323 to
CC AAA33992) are specifically claimed ONs from the present invention. N.B.
CC Sequences given in the disclosure of the present invention do not match
CC up with their corresponding SEQ ID NO: sequences given in the sequence
CC listing

PT Low adenosine (A) content antisense oligonucleotides which do not trigger
PT adenosine receptors during metabolism, useful e.g. for treating cancers
PT and respiratory obstructions.
XX
PS Disclosure; Page 887-891; 1592pp; English.
XX
CC The present invention describes low adenosine (A) content antisense
CC oligonucleotides and compositions (I) comprising them. In the antisense
CC oligonucleotides the A is replaced by a 'Universal' or alternative base.
CC (I) can have respiratory, bronchodilator, antiinflammatory, analgesic,
CC immunosuppressive, antiasthmatic, hypotensive and cytostatic activities.
CC The antisense oligonucleotides and (I) can be used to down-regulate the
CC expression and or activity of target polypeptides associated with
CC lung/respiratory disorders and malignancies, such as stimulating and
CC activating peptide factors and transmitters, transcription factors,
CC immunoglobulins and antibodies, antibody receptors, cytokines and
CC chemokines, endogenously produced specific and non-specific enzymes,
CC binding proteins, adhesion molecules and their receptors, cytokine and
CC chemokine receptors, adenosine receptors, bradykinin receptors, central
CC nervous system (CNS) and peripheral nervous and non-nervous system
CC receptors, CNS and peripheral nervous and non-nervous system peptide
CC transmitters, defensins, growth factors, vasoactive peptides and
CC receptors, binding proteins and malignancy associated proteins. The
CC antisense oligonucleotides may be used in this way to treat disorders
CC including respiratory obstruction (especially pulmonary obstruction
CC and/or bronchoconstriction) and/or lung inflammation, allergy(ies) and/or
CC surfactant hypoproduction which are associated with a disease or
CC condition selected from pulmonary vasoconstriction, inflammation,
CC allergies, asthma, impeded respiration, respiratory distress syndrome
CC (RDS), pain, cystic fibrosis (CF), allergic rhinitis (AR), pulmonary
CC hypertension, emphysema, chronic obstructive pulmonary disease (COPD),
CC pulmonary transplantation rejection, pulmonary infections, bronchitis,
CC and/or cancer. AAF18434 to AAF21543 represent human polynucleotide
CC fragments and antisense oligonucleotides used in the exemplification of
CC the present invention

CC The invention relates to a novel pharmaceutical composition, which has a
CC first active agent comprising an oligonucleotide antisense to the
CC initiation codon, coding region, 5' or 3' end genomic flanking regions,
CC 5' and 3' intron-exon junctions, or regions within 2-10 nucleotides of
CC junctions of genes encoding a polypeptide associated with lung and/or
CC nasal airway dysfunction and a second active agent comprising an
CC antiinflammatory steroid and ubiquinone. A composition of the invention
CC has antiinflammatory, antiallergic, antiasthmatic, hypotensive,
CC immunosuppressive, and cytostatic activity. The composition may have a
CC use in antisense gene therapy. The composition is useful for treating or
CC preventing a respiratory, lung or malignant disease or condition, also
CC for enhancing the prophylactic or therapeutic respiratory effect of an
CC antiinflammatory steroid in a subject, for reducing or depleting levels
CC of, or reducing sensitivity to adenosine, reducing levels of adenosine
CC receptor, producing bronchodilation, increasing levels of ubiquinone or
CC lung surfactant in a subject's tissue, or treating bronchoconstriction,
CC lung inflammation, lung allergies, or a respiratory disease or condition.

```

PT   Pharmaceutical composition for treating asthma, has antisense
PT   oligonucleotide containing less percentage of adenosine, targeted to
PT   nucleic acids associated with lung airway or lung dysfunction, and
PT   bronchodilating agent.
XX
PS   Claim 15; SEQ ID NO 12022; 763pp; English.
XX
CC   This invention describes a novel composition (a) a first active agent,
CC   comprising oligonucleotides, effective for alleviating
CC   bronchoconstriction, respiratory tract inflammation, allergies and
CC   reducing adenosine sensitivity, levels of adenosine (A) or (A) receptors,
CC   surfactant depletion or hyposecretion, when administered to a mammal. The
CC   oligonucleotides are derived from a gene encoding or regulating
CC   expression of a target polypeptide associated with lung airway or lung
CC   dysfunction or cancer and can be anti-sense to the corresponding mRNA.
CC   The invention also describes a kit, that comprises: (a) a delivery
CC   device, in separate containers, (b) the oligonucleotides, (c)
CC   instructions for adding a carrier and for use of the kit. The composition
CC   of the invention has antiallergic, antiinflammatory, antiasthmatic,
CC   analgesic, hypotensive, immunosuppressive and cytostatic activity, is a
CC   beta-adrenergic agonist. The composition is useful for preventing or
CC   treating a respiratory, lung or malignant disease. The administered
CC   composition comprises oligo and is administered to reduce the production
CC   or availability, or to increase the degradation of the target mRNA or to
CC   reduce the amount of target polypeptide present in the lungs. The
CC   pulmonary obstruction, and/or bronchoconstriction and/or lung
CC   inflammation, allergies and/or surfactant hypoproduction are associated
CC   with a disease or condition such as pulmonary vasoconstriction,
CC   inflammation, allergies, asthma, impeded respiration, respiratory
CC   distress syndrome, pain, cystic fibrosis, allergic rhinitis, pulmonary
CC   hypertension, emphysema, chronic obstructive pulmonary disease, pulmonary
CC   transplantation rejection, pulmonary infections, bronchitis or cancer.
CC   The reduced adenosine content of the anti-sense oligos corresponding to
CC   thymidines present in the target RNA serves to prevent the breakdown of
CC   the oligonucleotides into products that free adenosine into the system
CC   e.g., lung, brain, heart, kidney, etc, tissue environment and thereby, to
CC   prevent any unwanted effects due to it

XX
CC The present invention describes a new composition comprising an antisense
CC oligonucleotide (ON) with low adenosine (up to 15%), which targets
CC nucleic acids involved in bronchoconstriction, allergies, and/or
CC inflammation. The ON can have antiinflammatory, antiallergic,
CC antiasthmatic, cytostatic and analgesic activities. The compositions are
CC useful for the treatment of diseases associated with inflammation,
CC impaired airways, including lung disease and diseases whose secondary
CC effects afflict the lungs of a subject. They can be used for treating
CC e.g. ischaemic conditions, pulmonary vasoconstriction, allergies, asthma,
CC impeded respiration, respiratory distress syndrome, pain, cystic
CC fibrosis, pulmonary hypertension, emphysema, chronic obstructive
CC pulmonary disease (COPD), and cancers such as leukaemias, lymphomas,
CC carcinomas, and cancers which may metastasise to the lungs, including
CC breast and prostate cancer. The reduction of the adenosine content of the
CC ONs reduces side effects. The A-containing ONs break down with the
CC release of deoxyadenosine which activates adenosine receptors causing
CC bronchoconstriction and inflammation. AAA32313 to AAA35312 represent the
CC nucleotide sequences given in the sequence listing from the present
CC invention, which correspond to SEQ ID NO:1 to 2815, and then the last 185
CC sequences are also called SEQ ID NO:1 to 185, but the sequences differ
CC from the previously named sequences. SEQ ID NO:11 to 1680 (AAA32323 to
CC AAA33992) are specifically claimed ONs from the present invention. N.B.
CC Sequences given in the disclosure of the present invention do not match
CC up with their corresponding SEQ ID NO: sequences given in the sequence
CC listing

PS Disclosure; Page 891-896; 1592pp; English.
XX
CC The present invention describes low adenosine (A) content antisense
CC oligonucleotides and compositions (I) comprising them. In the antisense
CC oligonucleotides the A is replaced by a 'Universal' or alternative base.
CC (I) can have respiratory, bronchodilator, antiinflammatory, analgesic,
CC immunosuppressive, antiasthmatic, hypotensive and cytostatic activities.
CC The antisense oligonucleotides and (I) can be used to down-regulate the
CC expression and or activity of target polypeptides associated with
CC lung/respiratory disorders and malignancies, such as stimulating and
CC activating peptide factors and transmitters, transcription factors,
CC immunoglobulins and antibodies, antibody receptors, cytokines and
CC chemokines, endogenously produced specific and non-specific enzymes,
CC binding proteins, adhesion molecules and their receptors, cytokine and
CC chemokine receptors, adenosine receptors, bradykinin receptors, central
CC nervous system (CNS) and peripheral nervous and non-nervous system
CC receptors, CNS and peripheral nervous and non-nervous system peptide
CC transmitters, defensins, growth factors, vasoactive peptides and
CC receptors, binding proteins and malignancy associated proteins. The
CC antisense oligonucleotides may be used in this way to treat disorders
CC including respiratory obstruction (especially pulmonary obstruction
CC and/or bronchoconstriction) and/or lung inflammation, allergy(ies) and/or
CC surfactant hypoproduction which are associated with a disease or
CC condition selected from pulmonary vasoconstriction, inflammation,
CC allergies, asthma, impeded respiration, respiratory distress syndrome
CC (RDS), pain, cystic fibrosis (CF), allergic rhinitis (AR), pulmonary
CC hypertension, emphysema, chronic obstructive pulmonary disease (COPD),
CC pulmonary transplantation rejection, pulmonary infections, bronchitis,
CC and/or cancer. AAF18434 to AAF21543 represent human polynucleotide
CC fragments and antisense oligonucleotides used in the exemplification of
CC the present invention

XX
CC The invention relates to a novel pharmaceutical composition, which has a
CC first active agent comprising an oligonucleotide antisense to the
CC initiation codon, coding region, 5' or 3' end genomic flanking regions,
CC 5' and 3' intron-exon junctions, or regions within 2-10 nucleotides of
CC junctions of genes encoding a polypeptide associated with lung and/or
CC nasal airway dysfunction and a second active agent comprising an
CC antiinflammatory steroid and ubiquinone. A composition of the invention
CC has antiinflammatory, antiallergic, antiasthmatic, hypotensive,
CC immunosuppressive, and cytostatic activity. The composition may have a
CC use in antisense gene therapy. The composition is useful for treating or
CC preventing a respiratory, lung or malignant disease or condition, also
CC for enhancing the prophylactic or therapeutic respiratory effect of an
CC antiinflammatory steroid in a subject, for reducing or depleting levels
CC of, or reducing sensitivity to adenosine, reducing levels of adenosine
CC receptor, producing bronchodilation, increasing levels of ubiquinone or
CC lung surfactant in a subject's tissue, or treating bronchoconstriction,
CC lung inflammation, lung allergies, or a respiratory disease or condition.
CC Note: The sequence data for this patent is not represented in the printed
CC specification, but was obtained in electronic format directly from WIPO
CC at ftp.wipo.int/pub/published_pct_sequences

PT   Pharmaceutical composition for treating asthma, has antisense
PT   oligonucleotide containing less percentage of adenosine, targeted to
PT   nucleic acids associated with lung airway or lung dysfunction, and
PT   bronchodilating agent.
XX
PS   Claim 15; SEQ ID NO 12023; 763pp; English.
XX
CC   This invention describes a novel composition (a) a first active agent,
CC   comprising oligonucleotides, effective for alleviating
CC   bronchoconstriction, respiratory tract inflammation, allergies and
CC   reducing adenosine sensitivity, levels of adenosine (A) or (A) receptors,
CC   surfactant depletion or hyposecretion, when administered to a mammal. The
CC   oligonucleotides are derived from a gene encoding or regulating
CC   expression of a target polypeptide associated with lung airway or lung
CC   dysfunction or cancer and can be anti-sense to the corresponding mRNA.
CC   The invention also describes a kit, that comprises: (a) a delivery
CC   device, in separate containers, (b) the oligonucleotides, (c)
CC   instructions for adding a carrier and for use of the kit. The composition
CC   of the invention has antiallergic, antiinflammatory, antiasthmatic,
CC   analgesic, hypotensive, immunosuppressive and cytostatic activity, is a
CC   beta-adrenergic agonist. The composition is useful for preventing or
CC   treating a respiratory, lung or malignant disease. The administered
CC   composition comprises oligo and is administered to reduce the production
CC   or availability, or to increase the degradation of the target mRNA or to
CC   reduce the amount of target polypeptide present in the lungs. The
CC   pulmonary obstruction, and/or bronchoconstriction and/or lung
CC   inflammation, allergies and/or surfactant hypoproduction are associated
CC   with a disease or condition such as pulmonary vasoconstriction,
CC   inflammation, allergies, asthma, impeded respiration, respiratory
CC   distress syndrome, pain, cystic fibrosis, allergic rhinitis, pulmonary
CC   hypertension, emphysema, chronic obstructive pulmonary disease, pulmonary
CC   transplantation rejection, pulmonary infections, bronchitis or cancer.
CC   The reduced adenosine content of the anti-sense oligos corresponding to
CC   thymidines present in the target RNA serves to prevent the breakdown of
CC   the oligonucleotides into products that free adenosine into the system
CC   e.g., lung, brain, heart, kidney, etc, tissue environment and thereby, to
CC   prevent any unwanted effects due to it

PT   Detecting granulocyte activation by detecting differential expression of
PT   genes associated with granulocyte activation, which serves as diagnostic
PT   markers that is useful for monitoring disease states and drug toxicity.
XX
PS   Claim 1; SEQ ID NO 1327; 114pp; English.
XX
CC   The invention relates to detecting (M1) granulocyte (GC) activation
CC   (GCA), by detecting the level of expression of gene(s) (Gs) identified by
CC   DNA chip analysis as given in the specification, and comparing the
CC   expression level to an expression level in an unactivated GC, where
CC   differential expression of Gs is indicative of GCA. Also included are
```

```
CC   modulating (M2) GA by contacting GC with an agent that alters the
CC   expression of at least one gene in Gs; (2) screening (M3) for an agent
CC   capable of modulating GCA or an inflammation (especially chronic) in a
CC   tissue, an allergic response in a subject, exposure of a subject to a
CC   pathogen or sterile inflammatory disease using the gene expression
CC   profile; (3) detecting (M4) an inflammation (especially chronic) in a
CC   tissue, an allergic response in a subject, exposure of a subject to a
CC   pathogen or sterile inflammatory disease, by detecting the level of
CC   expression in a sample of the tissue of gene(s) from Gs, where the level
CC   of expression of the gene is indicative of inflammation; (4) treating
CC   (M5) an inflammation (especially chronic) or in a tissue, an allergic
CC   response in a subject, exposure of a subject to a pathogen or sterile
CC   inflammatory disease, by contacting a tissue having inflammation with an
CC   agent that modulates the expression of gene(s) from Gs in the tissue. M1
CC   is useful for detecting GCA; M2 is useful for modulating GA; M3 is useful
CC   for screening an agent capable of modulating GCA preferably in an
CC   inflammation in a tissue; M4 is useful for detecting an inflammation
CC   (especially chronic) in a tissue, an allergic response in a subject,
CC   exposure of a subject to a pathogen or sterile inflammatory disease (e.g.
CC   psoriasis, rheumatoid arthritis, glomerulonephritis, asthma, thrombosis,
CC   cardiac reperfusion injury, renal reperfusion injury, ARDS, adult
CC   respiratory distress syndrome, inflammatory bowel disease, Crohn's
CC   disease, ulcerative colitis, periodontal disease; also bacterial
CC   infection, viral infection, parasitic infection, protozoal infection,
CC   fungal infection and M5 is useful for treating one of the above
CC   conditions. The present sequence represents a gene differentially
CC   expressed in granulocytes. Note: The sequence data for this patent did
CC   not form part of the printed specification, but was obtained in
CC   electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences

XX
PT   Single copy genomic hybridization probes for detecting specific nucleic
PT   acid sequences in sample by in situ hybridization useful for detection of
PT   acquired or inherited genetic diseases.
XX
PS   Example 1; SEQ ID NO 74; 30pp; English.
XX
CC   The invention relates to a nucleic acid hybridisation probe comprising a
CC   labelled, single copy nucleic acids of at least 50 nucleotides, which
CC   will hybridise to a deduced single copy sequence interval in target
CC   nucleic acid (TNA) of known sequence. The single copy sequence is deduced
CC   by comparing the target nucleic acid (e.g. a disease causing gene) with a
CC   collection of high and low complexity repeat sequences as found in the
CC   genome of the organism from containing the target nucleic acid. The probe
CC   is generated by PCR on the target sequence. The probe is essentially free
CC   of blocking nucleic acid sequences which will hybridise to repeat
CC   sequences within the genome of which the TNA is a part, and is labelled
CC   with a label selected from fluorochrome-responsive labels, fluorochromes,
CC   calorimetric chemical, conjugated proteins, antibodies, antigens and
CC   their mixtures. The probe is useful in a hybridisation method, where the
CC   hybridisation method is from in situ hybridisation, Southern blot, and
CC   other methods in which nucleic acid is immobilised, where the method
CC   further comprises selecting a single copy nucleic acid which will
CC   hybridise to a duplicon or triplicon sequence domain. The probe is useful
CC   for determining the existence of previously unknown repeat sequence
CC   families in a genome. The method comprises reacting a labelled probe with
CC   the genome, causing the probe to hybridise and ascertaining if the probe
CC   hybridises to the genome at more than three preferably ten different
CC   locations as a determination of new repeat sequence family, where the
CC   determining step comprises selecting the single copy sequence from a
CC   duplicon or triplicon sequence domain. The probe is useful for
CC   determining a chromosome breakpoint and is useful in the fields for
CC   cytogenetics and molecular genetics for determining the presence of
CC   specific nucleic acid sequences in a sample of eukaryotic origin, e.g.
CC   the probes may be used to analyse specific chromosomal locations by in
CC   situ hybridisation as a detection of acquired or inherited genetic
CC   diseases especially for detection of genetic or neoplastic disorders.
CC   Unlike prior art techniques, the probe permits more precise chromosomal
CC   breakpoint determinations by in situ hybridisation. The genomic sequence
CC   comprising the human HIRA gene (histone cell cycle regulation defective,
CC   S. cerevisiae, homologue A) was analysed for single copy sequence
CC   intervals for use as probes of the invention. HIRA is located on
CC   chromosome 22 as a duplicate, deletions of 1 copy lead to DiGeorge and
CC   Velo-Cardio-facial syndromes. The present sequence is a high complexity
```

```
CC   repeat found within the human genome used to analyse the HIRA gene for
CC   repeat regions. Note: The sequence data for this patent did not form part
CC   of the printed specification, but was obtained in electronic format
CC   directly from USPTO at seqdata.uspto.gov/sequence.html?DocID=20030224356.

PT Single copy genomic hybridization probes for detecting specific nucleic
PT acid sequences in sample by in situ hybridization useful for detection of
PT acquired or inherited genetic diseases.
XX
PS Example 1; SEQ ID NO 358; 30pp; English.
XX
CC The invention relates to a nucleic acid hybridisation probe comprising a
CC labelled, single copy nucleic acids of at least 50 nucleotides, which
CC will hybridise to a deduced single copy sequence interval in target
CC nucleic acid (TNA) of known sequence. The single copy sequence is deduced
CC by comparing the target nucleic acid (e.g. a disease causing gene) with a
CC collection of high and low complexity repeat sequences as found in the
CC genome of the organism from containing the target nucleic acid. The probe
CC is generated by PCR on the target sequence. The probe is essentially free
CC of blocking nucleic acid sequences which will hybridise to repeat
CC sequences within the genome of which the TNA is a part, and is labelled
CC with a label selected from fluorochrome-responsive labels, fluorochromes,
CC calorimetric chemical, conjugated proteins, antibodies, antigens and
CC their mixtures. The probe is useful in a hybridisation method, where the
CC hybridisation method is from in situ hybridisation, Southern blot, and
CC other methods in which nucleic acid is immobilised, where the method
CC further comprises selecting a single copy nucleic acid which will
CC hybridise to a duplicon or triplicon sequence domain. The probe is useful
CC for determining the existence of previously unknown repeat sequence
CC families in a genome. The method comprises reacting a labelled probe with
CC the genome, causing the probe to hybridise and ascertaining if the probe
CC hybridises to the genome at more than three preferably ten different
CC locations as a determination of new repeat sequence family, where the
CC determining step comprises selecting the single copy sequence from a
CC duplicon or triplicon sequence domain. The probe is useful for
CC determining a chromosome breakpoint and is useful in the fields for
CC cytogenetics and molecular genetics for determining the presence of
CC specific nucleic acid sequences in a sample of eukaryotic origin, e.g.
CC the probes may be used to analyse specific chromosomal locations by in
CC situ hybridisation as a detection of acquired or inherited genetic
CC diseases especially for detection of genetic or neoplastic disorders.
CC Unlike prior art techniques, the probe permits more precise chromosomal
CC breakpoint determinations by in situ hybridisation. The genomic sequence
CC comprising the human HIRA gene (histone cell cycle regulation defective,
CC S. cerevisiae, homologue A) was analysed for single copy sequence
CC intervals for use as probes of the invention. HIRA is located on
CC chromosome 22 as a duplicate, deletions of 1 copy lead to DiGeorge and
CC Velo-Cardio-facial syndromes. The present sequence is a high complexity
CC repeat found within the human genome used to analyse the HIRA gene for
CC repeat regions. Note: The sequence data for this patent did not form part
CC of the printed specification, but was obtained in electronic format
CC directly from USPTO at seqdata.uspto.gov/sequence.html?DocID=20030224356.

PT guanosine triphosphate-binding protein coupled receptor.
XX
PS Disclosure; SEQ ID NO 2075; 28pp; English.
XX
CC The invention relates to a novel polynucleotide encoding a guanosine
CC triphosphate-binding protein coupled receptor (GPCR). A polynucleotide of
CC the invention may have a use in gene therapy. The polynucleotide and
CC polypeptide are useful for preparing a composition for treating a patient
CC in need of increased or suppressed activity or expression of the
CC guanosine triphosphate-binding protein coupled receptor. The protein
CC sequences shown in ADC87618-ADC87623 represent polynucleotide sequences
CC related to the invention.

PT   New cancer-associated nucleic acid for diagnosing, preventing or treating
PT   cancer (e.g. lymphoma) or for screening agents that may be used for
PT   treating or preventing cancer.
XX
PS   Claim 16; SEQ ID NO 154; 143pp; English.
XX
CC   The present invention describes human cancer-associated (CA) nucleotide
CC   sequences (I). Also described: (1) an expression vector comprising (I);
CC   (2) a host cell comprising (I) or the expression vector; (3) a microarray
CC   for detecting a CA nucleic acid; (4) an isolated polypeptide encoded
CC   within an open reading frame of a CA sequence; (5) an isolated antibody,
CC   or its antigen binding fragment, that binds to the above polypeptide; (6)
CC   a hybridoma that produces the monoclonal antibody described above; (7) a
CC   pharmaceutical composition comprising the antibody and a pharmaceutical
CC   excipient; (8) a kit for detecting or diagnosing cancer cells, comprising
CC   the above (monoclonal) antibody or polynucleotide that selectively
CC   hybridises to any of the polynucleotide sequences mentioned above; (9)
CC   methods for diagnosing cancer or for detecting the presence or absence of
CC   cancer cells in an individual; (10) a method for inhibiting growth of
CC   cancer cells in an individual; (11) a method for delivering a therapeutic
CC   agent to cancer cells in an individual; (12) an electronic library
CC   comprising the polynucleotide or polypeptide, or their fragments,
CC   mentioned above; (13) a method of screening for anticancer activity; (14)
CC   methods for detecting cancer associated with expression of a polypeptide
CC   or the presence of the antibody in a test cell or serum sample; (15) a
CC   method for screening for a bioactive agent capable of modulating the
CC   activity of a CA protein encoded by the above nucleic acid molecule; and
CC   (16) a method for treating cancers. (I) has cytostatic activity, and can
CC   be used in gene therapy, in vaccines, as a tyrosine kinase antagonist,
CC   and as a G-protein coupled receptor antagonist. The compositions and
CC   methods of the present invention can be used for diagnosing, preventing
CC   and treating cancer, especially lymphomas. They may also be used in
CC   screening for agents that may be used for treating or preventing cancer.
CC   The present sequence represents a human CA gene sequence, which is given
CC   in the exemplification of the present invention. Note: The sequence data
CC   for this patent did not form part of the printed specification, but was
CC   obtained in electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences.

PT New vector comprising one or more immunoglobulin regions selected from V,
PT D, and J regions, a 5' flanking region, and a 3' flanking region, useful
PT for reverting cell lines to a pro-B cell-like state or to a germline-like
PT state.
XX
PS Example 1; Page 234-283; 382pp; English.
XX
CC The specification describes a method for the preparation of
CC immunoglobulins. The method uses a vector for reverting cell lines to a
CC pro-B cell-like state or to a germline-like state, by replacing one or
CC more of the immunoglobulin regions V, D, and J of the rearranged
CC immunoglobulin gene with the germ-line or unrearranged V, D or J regions.
CC The vector can comprise a polynucleotide sequence encoding a
CC recombination-promoting protein, selected from recombination activating
CC gene 1 (RAG-1), RAG-2, terminal deoxynucleotidyltransferase (TdT). These
CC proteins collectively constitute a V(D)J recombinase. The method is
CC useful for the preparation of immunoglobulin heavy and/or light chains
CC and their fragments. The present sequence encodes a human immunoglobulin
CC heavy chain variable region, and is used as a template to construct
CC vectors for use in the method of the invention.

PT   New human transporter peptide, useful for identifying agents that can be
PT   used to treat a disease or condition mediated by a human transporter
PT   protein e.g. hypoglycemia.
XX
PS   Claim 4; Page 221-466; 466pp; English.
XX
CC   The present invention relates to a new peptide. The invention is useful
CC   for treating a disease or condition mediated by a human transporter
CC   protein e.g. hypoglycaemia. The present nucleic acid sequence represents
CC   the human transporter protein genomic DNA sequence. Note: This sequence
CC   is shorter that the printed sequence (507421bp) as the polymorphisms
CC   shown in the specification have been substituted by the corresponding
CC   degenerate codons

PT   New cancer-associated nucleic acid for diagnosing, preventing or treating
PT   cancer (e.g. lymphoma) or for screening agents that may be used for
PT   treating or preventing cancer.
XX
PS   Claim 16; SEQ ID NO 34; 143pp; English.
XX
CC   The present invention describes human cancer-associated (CA) nucleotide
CC   sequences (I). Also described: (1) an expression vector comprising (I);
CC   (2) a host cell comprising (I) or the expression vector; (3) a microarray
CC   for detecting a CA nucleic acid; (4) an isolated polypeptide encoded
CC   within an open reading frame of a CA sequence; (5) an isolated antibody,
CC   or its antigen binding fragment, that binds to the above polypeptide; (6)
CC   a hybridoma that produces the monoclonal antibody described above; (7) a
CC   pharmaceutical composition comprising the antibody and a pharmaceutical
CC   excipient; (8) a kit for detecting or diagnosing cancer cells, comprising
CC   the above (monoclonal) antibody or polynucleotide that selectively
CC   hybridises to any of the polynucleotide sequences mentioned above; (9)
CC   methods for diagnosing cancer or for detecting the presence or absence of
CC   cancer cells in an individual; (10) a method for inhibiting growth of
CC   cancer cells in an individual; (11) a method for delivering a therapeutic
CC   agent to cancer cells in an individual; (12) an electronic library
CC   comprising the polynucleotide or polypeptide, or their fragments,
CC   mentioned above; (13) a method of screening for anticancer activity; (14)
CC   methods for detecting cancer associated with expression of a polypeptide
CC   or the presence of the antibody in a test cell or serum sample; (15) a
CC   method for screening for a bioactive agent capable of modulating the
CC   activity of a CA protein encoded by the above nucleic acid molecule; and
CC   (16) a method for treating cancers. (I) has cytostatic activity, and can
CC   be used in gene therapy, in vaccines, as a tyrosine kinase antagonist,
CC   and as a G-protein coupled receptor antagonist. The compositions and
CC   methods of the present invention can be used for diagnosing, preventing
CC   and treating cancer, especially lymphomas. They may also be used in
CC   screening for agents that may be used for treating or preventing cancer.
CC   The present sequence represents a human CA gene sequence, which is given
CC   in the exemplification of the present invention. Note: The sequence data
CC   for this patent did not form part of the printed specification, but was
CC   obtained in electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences.

PT   New nucleic acid encoding mutant protein involved in synaptogenesis,
PT   useful for treatment and diagnosis of e.g. autism, Asperger syndrome, and
PT   schizophrenia.
XX
PS   Claim 10; SEQ ID NO 1; 416pp; French.
XX
```

```
CC   The invention relates to an isolated or purified polynucleotide encoding
CC   a polypeptide (the wild-type form of which is involved in synaptogenesis)
CC   that includes at least one mutation associated with development of
CC   neurological disease and/or a predisposition to development of mental
CC   disorders or psychiatric illness. The polypeptide are used to screen for
CC   agents that modulate their activity. Also nucleic acid, polypeptide,
CC   polypeptide-specific antibodies, vectors containing he nucleic acid and
CC   host cells containing the vector, are useful as pharmaceuticals for
CC   treating mental and neurological disorders, specifically autism, Asperger
CC   syndrome, schizophrenia and attention deficit hyperactivity disorder. The
CC   wild-type forms of the nucleic acid and polypeptide can be used
CC   similarly. Also detecting mutations in the nucleic acid and polypeptide,
CC   or measuring activity of the polypeptide, can be used to detect
CC   biochemical disorders that affect formation of synapses and to diagnose
CC   mental disease. This sequence corresponds to the genomic sequence of the
CC   human wild type HNL4X gene.

PT   Recombinant nucleic acid useful for diagnosis and treatment of carcinoma
PT   comprises a nucleotide sequence.
XX
PS   Claim 1; SEQ ID NO 898; 0pp; English.
XX
CC   The present invention relates to novel DNA and protein sequences which
CC   are associated with carcinomas. The sequences are useful for: (i) for
CC   screening drug candidates; (ii) for screening of bioactive agent capable
CC   of binding to Carcinoma Associated Protein (CAP); (iii) for screening of
CC   a bioactive agent capable of modulating the activity of CAP; (iv) for
CC   evaluating the effect of a candidate carcinoma drug; (v) for diagnosing
CC   carcinoma; (vi) for inhibiting the activity of CAP; (vii) for treating
CC   carcinoma; (viii) for neutralizing the effect of CAP; (ix) as a biochip;
CC   (x) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for
CC   determining Carcinoma Associated (CA) gene copy number. In addition, the
CC   CA genes are useful as DNA vaccines and the CAP are useful as markers of
CC   carcinoma including lymphoma. The present sequence is one such CA coding
CC   sequence. Note: This patent is an equivalent to basic patent
CC   US2002182586A1, for which no sequence data was published

PT   New isolated cancer associated nucleic acids comprising at least 10
PT   contiguous nucleotides, useful for diagnosing, preventing and/or treating
PT   cancers such as leukemia and lymphoma.
XX
PS   Claim 1; SEQ ID NO 368; 199pp; English.
XX
CC   The present invention relates to cancer associated sequences (ADQ97025-
CC   ADQ98004). The sequences are useful for the diagnosis, prevention and/or
CC   treatment of cancer, such as leukemia and lymphoma. Note: The sequence
CC   data for this patent did not form part of the printed specification, but
CC   was obtained in electronic formate directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences.

PT   Diagnosing breast cancer in a patient comprises detecting the level of
PT   gene expression in cell or tissue samples, where a differential gene
PT   expression is indicative of breast cancer.
XX
PS   Claim 1; SEQ ID NO 280; 260pp + Sequence Listing; English.
XX
CC   The present invention relates to methods of diagnosing breast cancer in a
CC   patient, which comprise detecting the level of expression in a tissue
CC   sample of two or more genes selected from those shown in ABT09867-
CC   ABT11112, where a differential expression of the genes indicates breast
CC   cancer. The methods are useful in diagnosing, treating, detecting the
CC   progression, and in monitoring treatment of breast cancer in patients.
CC   The methods are also useful as a screening tool for agents that modulate
CC   the onset or progression of breast cancer. The breast cancer genes may be
CC   used as diagnostic markers for the prediction or identification of the
CC   malignant state of breast tissue, for confirming the type and progression
CC   of cancer, and for drug screening and assays. The present sequence is a
CC   coding sequence of the invention. Note: The sequence data for this patent
CC   did not form part of the printed specification, but was obtained in
CC   electronic format directly from WIPO at
CC   ftp.wipo.int/pub.published_pct_sequences

PT Determining susceptibility of an individual to joint space narrowing,
PT osteophyte development and/or joint pain comprises identifying whether
PT the individual has at least one polymorphism in a polynucleotide encoding
PT a protein.
XX
PS Disclosure; SEQ ID NO 170; 297pp; English.
XX
CC The invention relates to a method of determining susceptibility of an
CC individual to joint space narrowing and/or osteophyte development and/or
CC joint pain comprising identifying whether the individual has at least one
CC polymorphism in a polynucleotide encoding at least one of the protein
CC listed in the specification. The methods, composition and agent are
CC useful for modulating the susceptibility of an individual to joint space
CC narrowing and/or osteophyte development and/or joint pain that is
CC associated with a disease, preferably osteoarthritis. The cell line and
CC the non-human animal are useful for screening for an agent for diagnosing
CC an individual having susceptibility to joint space narrowing and/or
CC osteophyte development and/or joint pain. This sequence corresponds to
CC the polynucleotide encoding a protein listed in the specification. (Note:
CC The sequence data for this patent did not form part of the printed
CC specification but was obtained in electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences).

CC   This invention relates to novel polynucleotides encoding human secreted
CC   proteins. Specifically, it refers to the vectors, host cells, recombinant
CC   and synthetic methods for producing human polynucleotides, polypeptides
CC   and antibodies. Furthermore, it relates to screening methods to identify
CC   agonists and antagonists that can be used to inhibit or enhance the
CC   production and function of the secreted proteins. The present invention
CC   describes these compositions as useful for diagnosing, treating or
CC   preventing disorders such as cancer, haematopoietic diseases including
CC   anaemia and multiple myeloma, reproductive system disorders including
CC   prostatitis and inguinal hernia, musculoskeletal diseases including
CC   systemic lupus erythematosus and gout, cardiovascular disease including
CC   arrhythmia and hypernatraemia, mixed fetal diseases including fetal
CC   alcohol syndrome and Down's syndrome, excretory diseases including
CC   urinary incontinence and renal disorders, neural or sensory disease
CC   including Alzheimer's disease and meningitis, respiratory disease
CC   including emphysema and occupational lung disease, endocrine diseases
CC   including diabetes and glomerulonephritis, digestive diseases including
CC   portal hypertension and irritable bowel syndrome and connective tissue or
CC   epithelial diseases including scleroderma and epidermolysis bullosa. As
CC   such, there are various activites such as cytostatic, antianemic,
CC   antiarthritic, antiasthmatic, anti-HIV, immunosuppressive,
CC   antiinflammatory, antipsoriatic, antibacterial, osteopathic,
CC   dermatological, antigout, immunomodulator, antiarrhythmic, cardiant,
CC   nootropic, antilipemic, nephrotropic, uropathic, neuroprotective,
CC   antiparkinsonian, tranquilizer, antidiabetic, anabolic, hypertensive and
CC   vulnerary. This polynucleotide is a DNA fragment of a BAC clone that
CC   encodes a human secreted protein of the invention. NOTE: This sequence
CC   does not appear in the printed specification but has been obtained in
CC   electronic format from the US patent office at the following web site
CC   www.seqdata.uspto.gov/sequence.html; Document ID: 20040010132.

PT   Fragments of chemically modified genes associated with tumor suppressor
PT   genes and oncogenes, useful in designing primers and probes for analyzing
PT   diseases associated with cytosine methylation state e.g. cancer.
XX
PS   Claim 1; SEQ ID NO 267; 27pp; English.
XX
CC   The invention relates to a nucleic acid comprising a sequence of 18
CC   bases, of a segment of chemically pretreated DNA (CP DNA) e.g. with
CC   bisulphite, of genes associated with tumour suppression and oncogenes
CC   having a sequence taken from 536 (actually 533 since numbers 408, 458 and
CC   500 are missing from the sequence listing) sequences (Ss) and sequences
CC   complementary to (Ss). The nucleic acid may be a peptide nucleic acid-
CC   oligomer (PNA) of at least 9 nucleotides and may form part of a set of
CC   probes for detecting the cytosine methylation state and/or single
CC   nucleotide polymorphisms and also to be used in an array for analysing
CC   diseases associated with CpG dinucleotides e.g. cancers and tumours. The
CC   probes can also be used in a method for ascertaining genetic and/or
CC   epigenetic parameters for the diagnosis and/or therapy of existing
CC   diseases or the predisposition to specific diseases, by analysing
CC   cytosine methylations. The parameters may be compared to another set of
CC   genetic and/or epigenetic parameters, the differences serving as basis
CC   for diagnosis and/or prognosis events which are disadvantageous to
CC   patients. The present sequence is one of the 533 genomic sequences
CC   derived from tumour suppressor genes and oncogenes. Note: The sequence
CC   data for this patent did not form part of the printed specification, but
CC   was obtained in electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences

PS   Claim 1; SEQ ID NO 1095; 28pp; English.
```

```
XX
CC   The invention relates to a novel polynucleotide encoding a guanosine
CC   triphosphate-binding protein coupled receptor (GPCR). A polynucleotide of
CC   the invention may have a use in gene therapy. The polynucleotide and
CC   polypeptide are useful for preparing a composition for treating a patient
CC   in need of increased or suppressed activity or expression of the
CC   guanosine triphosphate-binding protein coupled receptor. The
CC   polynucleotide sequences shown in ADC85548-ADC87616 encode GPCR's of the
CC   invention.

PT Novel isolated polynucleotide encoding human or mouse high affinity
PT choline transporter polypeptide, useful in gene therapy to increase
PT cholinergic function in a cell of a patient suffering from Alzheimer's
PT disease.
XX
PS Example 1; SEQ ID NO 13; 74pp; English.
XX
CC The present invention relates to the isolation of polynucleotide
CC sequences encoding human and mouse high-affinity choline transporter
CC (hCHT and mCHT respectively), and the proteins they encode. The gene
CC encoding hCHT is located on chromosome 2q12. The polynucleotide sequence
CC encoding hCHT, is useful for expressing hCHT recombinantly. The hCHT
CC polynucleotide sequence when delivered to a cell, increases cholinergic
CC function in the cell that is in a patient having Parkinson's disease,
CC Huntington's disease, Alzheimer's disease, schizophrenia, dysautonomia or
CC myasthenia gravis. The hCHT antibody is useful for controlling
CC transporter CHT proteins to the brain, and for treating the above
CC mentioned diseases. The antibody is also useful for diagnosing the above
CC mentioned disorders and to detect the influence of cholinergic
CC signalling. The present sequence represents a bacterial artificial
CC chromosome (BAC) sequence containing hCHT DNA. Note: The sequence data
CC for this patent was obtained in electronic format directly from the USPTO
CC web site at seqdata.uspto.gov.

XX
PT Single copy genomic hybridization probes for detecting specific nucleic
PT acid sequences in sample by in situ hybridization useful for detection of
PT acquired or inherited genetic diseases.
XX
PS Example 1; SEQ ID NO 351; 30pp; English.
XX
CC The invention relates to a nucleic acid hybridisation probe comprising a
CC labelled, single copy nucleic acids of at least 50 nucleotides, which
CC will hybridise to a deduced single copy sequence interval in target
CC nucleic acid (TNA) of known sequence. The single copy sequence is deduced
CC by comparing the target nucleic acid (e.g. a disease causing gene) with a
CC collection of high and low complexity repeat sequences as found in the
CC genome of the organism from containing the target nucleic acid. The probe
CC is generated by PCR on the target sequence. The probe is essentially free
CC of blocking nucleic acid sequences which will hybridise to repeat
CC sequences within the genome of which the TNA is a part, and is labelled
CC with a label selected from fluorochrome-responsive labels, fluorochromes,
CC calorimetric chemical, conjugated proteins, antibodies, antigens and
CC their mixtures. The probe is useful in a hybridisation method, where the
CC hybridisation method is from in situ hybridisation, Southern blot, and
CC other methods in which nucleic acid is immobilised, where the method
CC further comprises selecting a single copy nucleic acid which will
CC hybridise to a duplicon or triplicon sequence domain. The probe is useful
CC for determining the existence of previously unknown repeat sequence
CC families in a genome. The method comprises reacting a labelled probe with
CC the genome, causing the probe to hybridise and ascertaining if the probe
CC hybridises to the genome at more than three preferably ten different
CC locations as a determination of new repeat sequence family, where the
CC determining step comprises selecting the single copy sequence from a
CC duplicon or triplicon sequence domain. The probe is useful for
CC determining a chromosome breakpoint and is useful in the fields for
CC cytogenetics and molecular genetics for determining the presence of
CC specific nucleic acid sequences in a sample of eukaryotic origin, e.g.
CC the probes may be used to analyse specific chromosomal locations by in

```
CC   situ hybridisation as a detection of acquired or inherited genetic
CC   diseases especially for detection of genetic or neoplastic disorders.
CC   Unlike prior art techniques, the probe permits more precise chromosomal
CC   breakpoint determinations by in situ hybridisation. The genomic sequence
CC   comprising the human HIRA gene (histone cell cycle regulation defective,
CC   S. cerevisiae, homologue A) was analysed for single copy sequence
CC   intervals for use as probes of the invention. HIRA is located on
CC   chromosome 22 as a duplicate, deletions of 1 copy lead to DiGeorge and
CC   Velo-Cardio-facial syndromes. The present sequence is a high complexity
CC   repeat found within the human genome used to analyse the HIRA gene for
CC   repeat regions. Note: The sequence data for this patent did not form part
CC   of the printed specification, but was obtained in electronic format
CC   directly from USPTO at seqdata.uspto.gov/sequence.html?DocID=20030224356.

PT   Diagnosing susceptibility of individual to type II diabetes, involves
PT   detecting polymorphism in voltage-gated potassium channel-interacting
PT   protein 1 nucleic acid.
XX
PS   Disclosure; SEQ ID NO 1; 370pp; English.
XX
CC   The invention relates to a method of diagnosing (M1) a susceptibility to
CC   type II diabetes in an individual, by: (a) detecting a polymorphism in a
CC   voltage-gated potassium (Kv) channel-interacting protein 1 (KChIP1)
CC   nucleic acid; (b) detecting an alteration in the expression or
CC   composition of a polypeptide encoded by KChIP1 nucleic acid in a test
CC   sample; (c) determining the presence of a haplotype (H) comprising a
CC   haplotype designated A1-A6 and B1-B5 and haplotype of Icelandic
CC   population designated D2-D6 and Danish population designated D2-D5 as
CC   given in the specification at the 5q35 loci; (d) obtaining a nucleic acid
CC   sample, and analyzing for the presence of (H) at the 5q35 loci comprising
CC   a KChIP1 gene; (e) determining the presence of haplotype (H1) comprising
CC   one or more markers and/or single nucleotide polymorphisms (SNPs) of 142
CC   markers and/or SNPs (PM) as given in the specification in the locus on
CC   chromosome 5q35; or (f) screening for an at-risk haplotype in the KChIP1
CC   nucleic acid that is more frequently present in an individual susceptible
CC   to type II diabetes compared to an individual who is not susceptible to
CC   type II diabetes. (M1) is useful for diagnosing susceptibility to type II
CC   diabetes in an individual. A host cell is useful for producing a
CC   polypeptide encoded by an isolated nucleic acid molecule having
CC   polymorphism. An agent is useful for altering expression of a KChIP1
CC   nucleic acid. The type II diabetes therapeutic agent is useful for the
CC   treatment of a disease or condition associated with KChIP1 in an
CC   individual. This sequence corresponds to the voltage-gated potassium (Kv)
CC   channel-interacting protein 1 (KChIP1) genomic sequence.

PT Early detection of soft tissue sarcoma comprises determining expression
PT of a gene in a first soft tissue sample and a normal soft tissue sample
PT and comparing the gene expression, also useful in treating soft tissue
PT sarcoma.
XX
PS Example 2; SEQ ID NO 1744; 210pp; English.
XX
CC The invention relates to a novel method for detecting soft tissue sarcoma
CC which comprises obtaining a first soft tissue sample from an individual
CC and a normal soft tissue sample from the same or different individual,
CC determining the expression of a gene in both samples and comparing the
CC expression of the gene in both soft tissue samples, where a higher level
CC of protein expression in the first soft tissue sample indicates the
CC presence of soft tissue sarcoma. The method of the invention has
CC cytostatic applications and may be useful for detecting soft tissue
CC sarcoma, possibly via gene therapy or vaccine production. The nucleic
CC acid sequences may be useful in diagnostic and screening applications.
CC The current sequence is that of a human soft tissue sarcoma-upregulated
CC DNA of the invention. The current sequence is not shown within the
CC specification per se but was submitted in CD format by the inventor.

PT New vector comprising one or more immunoglobulin regions selected from V,
PT D, and J regions, a 5' flanking region, and a 3' flanking region, useful
PT for reverting cell lines to a pro-B cell-like state or to a germline-like
PT state.
XX
PS Example 1; Page 185-234; 382pp; English.
XX
CC The specification describes a method for the preparation of
CC immunoglobulins. The method uses a vector for reverting cell lines to a
CC pro-B cell-like state or to a germline-like state, by replacing one or
CC more of the immunoglobulin regions V, D, and J of the rearranged
CC immunoglobulin gene with the germ-line or unrearranged V, D or J regions.
CC The vector can comprise a polynucleotide sequence encoding a
CC recombination-promoting protein, selected from recombination activating
CC gene 1 (RAG-1), RAG-2, terminal deoxynucleotidyltransferase (TdT). These
CC proteins collectively constitute a V(D)J recombinase. The method is
CC useful for the preparation of immunoglobulin heavy and/or light chains
CC and their fragments. The present sequence encodes a human immunoglobulin
CC heavy chain variable region, and is used as a template to construct
CC vectors for use in the method of the invention.

XX
CC   This invention relates to novel, isolated full length human cDNA
CC   molecules and the encoded proteins thereof. Specifically, it refers to
CC   cDNA clones obtained by an oligo-capping method, where none of these
CC   clones are identical to any known human mRNAs. The present invention
CC   describes an immunoassay to identify agonists and antagonists, as well as
CC   antibodies, antisense molecules and siRNAs that can all be used to bind
CC   to and modulate expression of the cDNA molecules. As such, these
CC   molecules are useful for diagnostic markers or therapeutic targets for
CC   the various diseases or morbid states. In particular, they are useful in
CC   gene therapy for treating osteoporosis, neurological disease, Alzheimer's
CC   disease, Parkinson's disease, dementia, short memory and various cancers,
CC   as well as for maintaining equilibrium of sense or motor function, and
CC   for treating emotional reaction, fear response and panic. Accordingly,
CC   they exhibit osteopathic, neuroprotective, nootropic, antiparkinsonian,
CC   cytostatic and tranquiliser activities. This polynucleotide is a full
CC   length human cDNA sequence of the invention. NOTE: This sequence is not
CC   given in the sequence listing of the specification but can be obtained on
CC   CD-ROM from the European Patent Office, Vienna Sub-office.

PT   New recombinant nucleic acid encoding carcinoma associated protein,
PT   useful for preparing compositions for treating carcinomas.
XX
PS   Claim 1; SEQ ID NO 1418; 245pp; English.
XX
CC   The invention relates to recombinant carcinoma associated (CA) nucleic
CC   acid sequences from mouse and human (ADA01482-ADA03094), and to
CC   recombinant carcinoma associated proteins (CAP) encoded by them. The
CC   invention also encompasses expression vectors and host cells comprising a
CC   CA nucleic acid, a polypeptide (especially an antibody) that specifically
CC   binds to the protein, and a biochip comprising CA nucleic acid or
CC   fragments thereof. The sequences of the invention were identified using
CC   oncogenic retroviruses, which insert into the genome of the host organism
CC   at random. Many of these do not carry transduced host oncogenes or
CC   pathogenic trans-acting viral genes, meaning that cancer incidence is a
CC   direct consequence of the effects of proviral integration into host
CC   protooncogenes. The CA nucleic acid sequences can be used to diagnose
CC   carcinoma (especially breast cancer, prostate cancer, lymphoma or
CC   leukaemia) or a propensity to carcinoma by determination of the sequence
CC   of a CA gene, or by determination of CA gene expression in particular
CC   tissues. CA nucleic acids, proteins and antibodies are also useful as
CC   therapeutic agents and in screening and evaluating drug candidates. The
CC   present sequence represents a specifically claimed human CA nucleic acid
CC   sequence of the invention. Note: The complete sequence data for this
CC   patent did not form part of the printed specification, but was obtained
CC   in electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences.

XX
PT New recombinant nucleic acid, useful for treating carcinomas, lymphomas,
PT cancers, neoplasm, adenocarcinoma, or sarcomas.
XX
PS Claim 1; SEQ ID NO 466; 2304pp; English.
XX
CC The invention relates to a novel recombinant nucleic acid comprising a
CC nucleotide sequence selected from any of the 660 sequences fully defined
CC in the specification. A polynucleotide of the invention has cytostatic
CC activity, and may have a use in gene therapy, or in a vaccine. The
CC recombinant nucleic acids and polypeptides are useful for treating
CC carcinomas, e.g. lymphomas, cancers, neoplasm, adenocarcinoma, and
CC sarcomas. The present sequence represents a human gene of the invention.

PT New carcinoma associated gene or protein, useful for preparing a
PT composition for diagnosing or treating carcinoma e.g., leukemia or
PT lymphoma.

XX
PS Claim 1; SEQ ID NO 166; 29pp; English.
XX
CC The invention relates to new recombinant nucleic acids. The invention
CC also relates to a host cell comprising a recombinant nucleic acid or
CC expression vector, an expression vector comprising a recombinant nucleic
CC acid, a recombinant protein, a method of screening for drug candidates, a
CC method of screening for a bioactive agent capable of binding to a
CC carcinoma associated protein (CAP) encoded by a nucleotide sequence, a
CC method of screening for a bioactive agent capable of modulating the
CC activity of a CAP, a method of evaluating the effect of a candidate
CC carcinoma drug, a method of diagnosing carcinoma, a method for inhibiting
CC the activity of a CAP, a method of treating carcinomas, a method of
CC neutralising the effect of a CAP and a method of diagnosing carcinoma or
CC propensity to carcinoma. A method of evaluating the effect of a candidate
CC carcinoma drug comprises administering the drug to a patient, removing a
CC cell sample from the patient and determining alterations in the
CC expression or activation of a gene comprising the nucleotide sequence. A
CC method of diagnosing carcinoma comprises determining the expression of
CC one or more genes comprising the nucleic acid sequence in a first tissue
CC type of a first individual and comparing the expression of the gene from
CC a second normal tissue type from the first individual or a second
CC unaffected individual, where a difference in the expression indicates
CC that the first individual has carcinoma. A method of inhibiting the
CC activity of a CAP comprises binding an inhibitor to the CAP. Treating
CC carcinomas comprises administering to a patient an inhibitor of CAP.
CC Neutralising the effect of a CAP comprises contacting an agent specific
CC for the CAP. The polypeptide specifically binds to the protein encoded by
CC the nucleic acid. It comprises an antibody that specifically binds to the
CC protein encoded by the nucleic acid. The nucleic acids are useful for
CC preparing a composition for diagnosing or treating carcinoma e.g.,
CC leukaemia or lymphoma. This sequence represents a human carcinoma
CC associated (CA) nucleic acid of the invention. Note: The sequence data
CC for this patent did not form part of the printed specification but was
CC obtained in electronic format directly from USPTO at
CC seqdata.uspto.gov/sequence.html.

CC The present invention relates to novel DNA and protein sequences which
CC are associated with carcinomas. The sequences are useful for: (i) for
CC screening drug candidates; (ii) for screening of bioactive agent capable
CC of binding to Carcinoma Associated Protein (CAP); (iii) for screening of
CC a bioactive agent capable of modulating the activity of CAP; (iv) for
CC evaluating the effect of a candidate carcinoma drug; (v) for diagnosing
CC carcinoma; (vi) for inhibiting the activity of CAP; (vii) for treating
CC carcinoma; (viii) for neutralizing the effect of CAP; (ix) as a biochip;
CC (x) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for
CC determining Carcinoma Associated (CA) gene copy number. In addition, the

CC CA genes are useful as DNA vaccines and the CAP are useful as markers of
CC carcinoma including lymphoma. The present sequence is one such CA coding
CC sequence. Note: This patent is an equivalent to basic patent
CC US2002182586A1, for which no sequence data was published

PT Novel human cancer associated protein encoded within open reading frame
PT of cancer associated gene, useful as targets for diagnosing cancer.
XX
PS Claim 16; SEQ ID NO 436; 182pp; English.
XX
CC The invention relates to cancer-associated proteins (CAP) and the cancer-
CC associated (CA) nucleic acids encoding them. The invention also relates
CC to a method for treating cancers involving administering to a patient an
CC inhibitor of CAP, and a method of screening for anticancer activity in a
CC potential drug involving providing a cell that expresses a CA gene,
CC contacting a tissue sample derived from a cancer cell with an anticancer
CC drug candidate and monitoring the effect of the anticancer drug candidate
CC on expression of the CA gene. The CAP proteins are useful for detecting
CC cancer associated with expression of a CAP protein in a test cell sample
CC and for screening for a bioactive agent capable of modulating the
CC activity of a CAP protein. The CA nucleic acids are useful for diagnosing
CC cancer, involving determining the expression of a CA nucleic acid in a
CC tissue. This sequence represents a human CA gene of the invention. Note:
CC The sequence data for this patent did not form part of the printed
CC specification, but was obtained in electronic format directly from WIPO

PT Determining predisposition of individual of Ashkenazi descent to prostate
PT cancer, involves determining presence or absence of one or more nucleic
PT acid sequence alteration in one or more allele of RNASEL gene of
PT individual.
XX
PS Claim 2; SEQ ID NO 2; 72pp; English.
XX
CC The present invention describes a method (M1) for determining

CC predisposition of subject, preferably Ashkenazi descent to prostate
CC cancer, comprising determining presence or absence of one or more nucleic
CC acid sequence alteration in one or more allele of RNASEL gene of the
CC individual, where presence of one or more nucleic acid sequence
CC alteration indicates predisposition to prostate cancer in the individual.
CC Also described: (1) oligonucleotide (I) specifically binding to the
CC nucleic acid alternation being chosen from deletion spanning nucleotide
CC 471-474 of ADG20557, C to T substitution at nucleotides 354 of ADG20557,
CC and deletion at nucleotide 11338427 of ADG20558; (2) a kit (II) for
CC diagnosing prostate cancer or predisposition to prostate cancer in a
CC subject, the kit comprising (I) and one or more reagent for detecting the
CC hybridization of (I) with nucleic acid isolated from subject; (3)
CC determining sensitivity of a subject to prospective interferon therapy,
CC comprising determining the presence or absence of one or more nucleic
CC acid alternation being chosen from deletion spanning nucleotide 471-474
CC of ADG20557, C to T substitution at nucleotides 354 of ADG20557, and
CC deletion at nucleotide 11338427 of ADG20558; (4) an antibody or its
CC fragment being capable of specifically binding to one or more portion of
CC amino acid residues 1-55 of RNASEL polypeptide; (5) an antibody (III) or
CC its fragment being capable of specifically binding a polypeptide
CC including amino acid sequence: Asn-Lys-Thr-Cys-Phe-His-Ser-Thr-Lys-Leu-
CC Thr-Val-Lys; and (6) a kit (IV) for diagnosing prostate cancer or a
CC predisposition to prostate cancer in a subject, the kit comprising the
CC antibody or its fragment and one or more reagent for detecting binding of
CC (III) to the polypeptide from the subject. RNASEL has cytostatic
CC activity. (M1) is useful for treating a subject having for predisposition
CC to prostate cancer, which involves specifically down regulating in the
CC subject expression of mutated RNASEL transcript having one or more
CC nucleic acid alternation being chosen from deletion spanning nucleotide
CC 471-474 of ADG20557, C to T substitution at nucleotides 354 of ADG20557,
CC and deletion at nucleotide 11338427 of ADG20558, and thereby preventing
CC the formation or halting the progression of prostate cancer in the
CC subject. The human RNASEL gene is located on chromosome 1, more
CC specifically to region 1q25. The present sequence is used in the
CC exemplification of the present invention.

XX
CC AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)
CC amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
CC activity, and can be used in gene therapy and vaccine production. (I)
CC proteins and polynucleotides may be used in the prevention, diagnosis and
CC treatment of diseases associated with inappropriate (I) expression. For
CC example, they may be used to treat disorders associated with decreased
CC expression by rectifying mutations or deletions in a patient's genome
CC that affect the activity of (I) by expressing inactive proteins or to
CC supplement the patients own production of (I). Additionally, (I)
CC polynucleotides may be used to produce the secreted (I), by inserting the
CC nucleic acids into a host cell and culturing the cell to express the
CC protein. (I) proteins and polynucleotides may be used to prevent,
CC diagnose and treat immune/haematopoietic-related diseases, especially
CC cancers and cancer metastases of haematopoietic-derived cells. AAK64703
CC to AAK87694 represent human immune/haematopoietic antigen genomic
CC sequences from the present invention. AAK54942 to AAK54950 and AAM82169
CC represent sequences used in the exemplification of the present invention

XX
PT Early detection of soft tissue sarcoma comprises determining expression
PT of a gene in a first soft tissue sample and a normal soft tissue sample
PT and comparing the gene expression, also useful in treating soft tissue
PT sarcoma.
XX
PS Example 2; SEQ ID NO 970; 210pp; English.
XX
CC The invention relates to a novel method for detecting soft tissue sarcoma
CC which comprises obtaining a first soft tissue sample from an individual
CC and a normal soft tissue sample from the same or different individual,
CC determining the expression of a gene in both samples and comparing the
CC expression of the gene in both soft tissue samples, where a higher level
CC of protein expression in the first soft tissue sample indicates the
CC presence of soft tissue sarcoma. The method of the invention has
CC cytostatic applications and may be useful for detecting soft tissue
CC sarcoma, possibly via gene therapy or vaccine production. The nucleic
CC acid sequences may be useful in diagnostic and screening applications.
CC The current sequence is that of a human soft tissue sarcoma-upregulated
CC DNA of the invention. The current sequence is not shown within the
CC specification per se but was submitted in CD format by the inventor.

PT New polynucleotide sequences obtained from various cDNA libraries, useful
PT as hybridization probes, as oligomers for PCR, for chromosome and gene
PT mapping, in the recombinant production of protein, or in generating
PT antisense DNA or RNA.
XX
PS Claim 1; SEQ ID NO 19554; 44pp; English.
XX
CC The invention relates to an isolated polynucleotide comprising any one of
CC 38043 cDNA sequences, appearing as ACH12789-ACH50831, whose sequence was
CC determined by the technique of SBH (sequencing by hybridisation). Also
CC included is a purified polypeptide comprising a sequence corresponding to
CC a reading frame of the novel polynucleotide. The nucleic acid sequences
CC are useful in diagnostics as expressed sequence tags (EST) for
CC identifying expressed genes or for physical mapping of the human genome,
CC in forensics, in assessing biodiversities, or in identifying mutations
CC responsible for genetic disorders and other traits. The nucleotide
CC sequences are also useful as hybridisation probes, as oligomers for PCR,
CC for chromosome and gene mapping, in the recombinant production of
CC protein, or in generating antisense DNA or RNA. The purified polypeptide
CC is useful for generating antibodies specific for it. The present sequence
CC is one of the 38043 isolated cDNA/EST sequences. Note: The sequence data
CC for this patent did not form part of the printed specification, but was
CC obtained in electronic format directly from USPTO at
CC seqdata.uspto.gov/sequence.html?DocID=20030073623

PT Diagnosing breast cancer in a patient comprises detecting the level of
PT gene expression in cell or tissue samples, where a differential gene
PT expression is indicative of breast cancer.
XX
PS Claim 1; SEQ ID NO 882; 260pp + Sequence Listing; English.
XX
CC The present invention relates to methods of diagnosing breast cancer in a
CC patient, which comprise detecting the level of expression in a tissue
CC sample of two or more genes selected from those shown in ABT09867-
CC ABT11112, where a differential expression of the genes indicates breast
CC cancer. The methods are useful in diagnosing, treating, detecting the
CC progression, and in monitoring treatment of breast cancer in patients.
CC The methods are also useful as a screening tool for agents that modulate
CC the onset or progression of breast cancer. The breast cancer genes may be
CC used as diagnostic markers for the prediction or identification of the
CC malignant state of breast tissue, for confirming the type and progression
CC of cancer, and for drug screening and assays. The present sequence is a
CC coding sequence of the invention. Note: The sequence data for this patent
CC did not form part of the printed specification, but was obtained in
CC electronic format directly from WIPO at

  TITLE     Direct Submission
  JOURNAL   Submitted (15-NOV-2001) Wellcome Trust Sanger Institute, Hinxton,
            Cambridgeshire, CB10 1SA, UK. E-mail enquiries:
            humquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk
COMMENT     On Nov 16, 2001 this sequence version replaced gi:15020514.
            During sequence assembly data is compared from overlapping clones.
            Where differences are found these are annotated as variations
            together with a note of the overlapping clone name. Note that the
            variation annotation may not be found in the sequence submission
            corresponding to the overlapping clone, as we submit sequences with
            only a small overlap as described above.
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one plasmid subclone or more than one M13 subclone; and the
            assembly was confirmed by restriction digest. The following
            abbreviations are used to associate primary accession numbers given
            in the feature table with their source databases: Em:, EMBL; Sw:,
            SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP
            database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
            was generated from part of bacterial clone contigs of human
            chromosome 1, constructed by the Sanger Centre Chromosome 1 Mapping
            Group.  Further information can be found at
            http://www.sanger.ac.uk/HGP/Chr1
            RP11-430G6 is from the library RPCI-11.2 constructed by the group
            of Pieter de Jong. For further details see
            http://www.chori.org/bacpac/home.htm
            VECTOR: pBACe3.6
            IMPORTANT: This sequence is not the entire insert of clone
            RP11-430G6 It may be shorter because we sequence overlapping
            sections only once, except for a short overlap.
            The true right end of clone RP11-430G6 is at 165329 in this
            sequence. The true right end of clone RP11-331H2 is at 2000 in this
            sequence.

               Contact: hum-info@sequence.stanford.edu
          -------------- Project Information
               Center project name: 880
               Center clone name: RP11-288O18
          -------------- Summary Statistics
               Sequencing Vector: M13mp18; X02513; 100% of reads
               Sequencing Vector: plasmid; plasmid_accession; 0% of reads
               Chemistry: Dye-primer; 1% of reads
               Chemistry: Dye-terminator Big Dye; 99% of reads
               Assembly program: Phrap; version 0.990319
               Consensus quality: 190680 bases at least Q40
               Consensus quality: 191287 bases at least Q30
               Consensus quality: 191336 bases at least Q20
               Insert size: 195548; agarose-fp
               Insert size: 191499; sum-of-contigs
               Quality coverage:  7.9x in Q20 bases; agarose-fp
               Quality coverage:  8.1x in Q20 bases; sum-of-contigs.
          * NOTE: This is a 'working draft' sequence. It currently
          * consists of 3 contigs. The true order of the pieces
          * is not known and their order in this sequence record is
          * arbitrary. Gaps between the contigs are represented as
          * runs of N, but the exact sizes of the gaps are unknown.
          * This record will be updated with the finished sequence
          * as soon as it is available and the accession number will
          * be preserved.
          *        1    12646: contig of 12646 bp in length
          *    12647    12746: gap of unknown length
          *    12747    94961: contig of 82215 bp in length
          *    94962    95061: gap of unknown length
          *    95062   191699: contig of 96638 bp in length.

  TITLE     Direct Submission
  JOURNAL   Submitted (14-OCT-2001) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     -------------- Genome Center
              Center: Baylor College of Medicine
              Center code: BCM
              Web site: http://www.hgsc.bcm.tmc.edu/
              Contact: hgsc-help@bcm.tmc.edu
            -------------- Project Information
              Center project name: ZUAM
              Center clone name: RP43-174K14
            -------------- Summary Statistics
              Sequencing vector: Plasmid; M77789
              Chemistry: Dye-terminator Big Dye: 100% of reads
              Assembly program: Phrap; version 0.990329
              Consensus quality: 196812 bases at least Q40
              Consensus quality: 208422 bases at least Q30
              Consensus quality: 218080 bases at least Q20
              Estimated insert size: 228347; sum-of-contigs estimation
              Quality coverage: 0x in Q20 bases; agarose-fp estimation
              Quality coverage: 7.1x in Q20 bases; sum-of-contigs estimation
            --------------
            * NOTE: Estimated insert size may differ from sequence length
            *   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 21 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1    30770: contig of 30770 bp in length
            *    30771    30870: gap of unknown length
            *    30871    52356: contig of 21486 bp in length
            *    52357    52456: gap of unknown length
            *    52457    72697: contig of 20241 bp in length
            *    72698    72797: gap of unknown length
            *    72798    90396: contig of 17599 bp in length
            *    90397    90496: gap of unknown length
            *    90497    96134: contig of 5638 bp in length
            *    96135    96234: gap of unknown length
            *    96235   114433: contig of 18199 bp in length

            Contact: humquery@sanger.ac.uk
            -------------- Project Information
            Center project name: bAP21A6
            -------------- Summary Statistics
            Assembly program: XGAP4; version 4.5
            Chemistry: Dye-terminator; 100% of reads
            Consensus quality: 103081 bases at least Q40
            Consensus quality: 103313 bases at least Q30
            Consensus quality: 103455 bases at least Q20
            Insert size: 104321; sum-of-contigs
            Insert size: 110232; 0.4% error; agarose-fp
            Quality coverage: 7.35x in Q20 bases; sum-of-contigs Quality
            coverage: 7.39x in Q20 bases; agarose-fp
            --------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 1 contigs. Gaps between the contigs
            * are represented as runs of N. The order of the pieces
            * is believed to be correct as given, however the sizes
            * of the gaps between them are based on estimates that have
            * provided by the submittor.
            * This sequence will be replaced
            * by the finished sequence as soon as it is available and
            * the accession number will be preserved.
            *       1   104321: contig of 104321 bp in length.

            -------------- Project Information
                Center project name: ZUAP
                Center clone name: RP43-54O15
            -------------- Summary Statistics
                Sequencing vector: Plasmid; M77789
                Sequencing vector: M13; L08821
                Chemistry: Dye-terminator Big Dye: 100% of reads
                Assembly program: Phrap; version 0.990329
                Consensus quality: 169928 bases at least Q40
                Consensus quality: 176100 bases at least Q30
                Consensus quality: 180968 bases at least Q20
                Estimated insert size: 183838; sum-of-contigs estimation
                Quality coverage: 0x in Q20 bases; agarose-fp estimation
                Quality coverage: 6.9x in Q20 bases; sum-of-contigs estimation
            --------------
            * NOTE: Estimated insert size may differ from sequence length
            *   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 16 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.

  TITLE     Direct Submission
  JOURNAL   Submitted (21-NOV-2001) Wellcome Trust Sanger Institute, Hinxton,
            Cambridgeshire, CB10 1SA, UK. E-mail enquiries:
            humquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk
COMMENT     On Nov 22, 2001 this sequence version replaced gi:17043779.
            During sequence assembly data is compared from overlapping clones.
            Where differences are found these are annotated as variations
            together with a note of the overlapping clone name. Note that the
            variation annotation may not be found in the sequence submission
            corresponding to the overlapping clone, as we submit sequences with
            only a small overlap as described above.
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one plasmid subclone or more than one M13 subclone; and the
            assembly was confirmed by restriction digest. The following
            abbreviations are used to associate primary accession numbers given
            in the feature table with their source databases: Em:, EMBL; Sw:,
            SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP
            database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
            was generated from part of bacterial clone contigs of human
            chromosome 9, constructed by the Sanger Centre Chromosome 9 Mapping
            Group.  Further information can be found at
            http://www.sanger.ac.uk/HGP/Chr9
            RP11-423C15 is from the library RPCI-11.2 constructed by the group
            of Pieter de Jong. For further details see
            http://www.chori.org/bacpac/home.htm
            VECTOR: pBACe3.6
            IMPORTANT: This sequence is not the entire insert of clone
            RP11-423C15 It may be shorter because we sequence overlapping
            sections only once, except for a short overlap.
            The true right end of clone RP11-423C15 is at 109081 in this
            sequence. The true left end of clone RP11-770B5 is at 78953 in this
            sequence. The true right end of clone RP11-12A16 is at 2000 in this
            sequence.

            -------------- Genome Center
                Center: Washington University Genome Sequencing Center
                Center code: WUGSC
                Web site: http://genome.wustl.edu/gsc
                Contact: sapiens@watson.wustl.edu
            -------------- Summary Statistics
                Center project name: H_NH0437E09
            --------------.

            NOTICE:  This sequence may not represent the entire insert of this
            clone.  It may be shorter because we only sequence overlapping
            clone sections once, or longer because we provide a small overlap
            between neighboring data submissions.

            This sequence was finished as follows unless otherwise noted:
            all regions were double stranded, sequenced with an alternate
            chemistry, or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by sequence
            from more than one subclone; and the assembly was confirmed by
            restriction digest.

            MAPPING INFORMATION:
            Mapping information for this clone was provided by Dr. John D.
            McPherson, Department of Genetics, Washington University, St. Louis
            MO.  For additional information about the map position of this
            sequence, see http://genome.wustl.edu/gsc

            SOURCE INFORMATION:
            The RPCI-11 human BAC library was made from the blood of one male
            donor, as described by Osoegawa,K., Woon,P.Y., Zhao,B., Frengen,E.,
            Tateno,M., Catanese,J.J. and de Jong,P.J. (1998) An improved
            approach for construction of bacterial artificial chromosome
            libraries.  Genomics 51:1-8.  The clone may be obtained either from
            Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong
            and coworkers at the Roswell Park Cancer Institute
            (http://bacpac.med.buffalo.edu)
            VECTOR:  pBACe3.6
            NEIGHBORING SEQUENCE INFORMATION:
            The clone sequenced to the left is RP11-289J14, 200 bp overlap; the
            clone sequenced to the right is AC061984.  Actual start of this
            clone is at base position 150577 of RP11-289J14; actual end is at
            base position 130349 of RP11-437E9.

  TITLE     Direct Submission
  JOURNAL   Submitted (13-OCT-2001) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     -------------- Genome Center
                Center: Baylor College of Medicine
                Center code: BCM
                Web site: http://www.hgsc.bcm.tmc.edu/
                Contact: hgsc-help@bcm.tmc.edu
            -------------- Project Information
                Center project name: ZUAW
                Center clone name: RP43-11J15
            -------------- Summary Statistics
                Sequencing vector: Plasmid; M77789
                Chemistry: Dye-terminator Big Dye: 100% of reads
                Assembly program: Phrap; version 0.990329
                Consensus quality: 190674 bases at least Q40
                Consensus quality: 194102 bases at least Q30
                Consensus quality: 196834 bases at least Q20
                Estimated insert size: 194298; sum-of-contigs estimation
                Quality coverage: 0x in Q20 bases; agarose-fp estimation
                Quality coverage: 8.1x in Q20 bases; sum-of-contigs estimation
            --------------
            * NOTE: Estimated insert size may differ from sequence length
            *   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 18 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1    17120: contig of 17120 bp in length
            *    17121    17220: gap of unknown length
            *    17221    36306: contig of 19086 bp in length
            *    36307    36406: gap of unknown length
            *    36407    58958: contig of 22552 bp in length
            *    58959    59058: gap of unknown length
            *    59059    82373: contig of 23315 bp in length

            -------------- Genome Center
                Center: Washington University Genome Sequencing Center
                Center code: WUGSC
                Web site: http://genome.wustl.edu
                Contact: sapiens@watson.wustl.edu
            -------------- Summary Statistics
                Center project name: H_NH0049G05
            --------------.

            NOTICE:  This sequence may not represent the entire insert of this
            clone.  It may be shorter because we only sequence overlapping
            clone sections once, or longer because we provide a small overlap
            between neighboring data submissions.

            This sequence was finished as follows unless otherwise noted:
            all regions were double stranded, sequenced with an alternate
            chemistry, or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by sequence
            from more than one subclone; and the assembly was confirmed by
            restriction digest.

            MAPPING INFORMATION:
            The sequence of this clone was established as part of a mapping and
            sequencing collaboration between the NHGRI Chromosome 7 Mapping
            Project (Eric D. Green, Director), John D. McPherson in the
            Department of Genetics (Washington University), and the Washington
            University Genome Sequencing Center. For additional information
            about the map position of this sequence, see
            http://www.nhgri.nih.gov/DIR/GTB/CHR7 , send
            mailto:egreen@nhgri.nih.gov , or see http://genome.wustl.edu

            SOURCE INFORMATION:
            The RPCI-11 human BAC library was made from the blood of one male
            donor, as described by Osoegawa,K., Woon,P.Y., Zhao,B., Frengen,E.,
            Tateno,M., Catanese,J.J. and de Jong,P.J. (1998) An improved
            approach for construction of bacterial artificial chromosome
            libraries. Genomics 51:1-8. The clone may be obtained either from
            Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong
            and coworkers at http://www.chori.org
            VECTOR:  pBACe3.6

            NEIGHBORING SEQUENCE INFORMATION:
            The clone sequenced to the left is RP11-409M7, 200 bp overlap the
            clone sequenced to the right is RP11-374N8.  Actual start of this
            clone is at base position 14572 of RP11-409M7 actual end is at base
            position 125685 of RP11-49G5.

  TITLE     Direct Submission
  JOURNAL   Submitted (02-FEB-2001) Sanger Centre, Hinxton, Cambridgeshire,
            CB10 1SA, UK. E-mail enquiries: humquery@sanger.ac.uk Clone
            requests: clonerequest@sanger.ac.uk
COMMENT     On Feb 5, 2001 this sequence version replaced gi:12584335.
            During sequence assembly data is compared from overlapping clones.
            Where differences are found these are annotated as variations
            together with a note of the overlapping clone name. Note that the
            variation annotation may not be found in the sequence submission
```

```
corresponding to the overlapping clone, as we submit sequences with
only a small overlap as described above.
This sequence has been finished according to sequence map criteria
as follows.  An attempt is made to resolve all sequencing problems,
such as compressions and repeats, but not necessarily within known
annotated repeat sequence elements.  Where the sequence is
ambiguous, there is an annotation using the 'unsure' feature key.
The following abbreviations are used to associate primary accession
numbers given in the feature table with their source databases:
Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
on the WORMPEP database can be found at
http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
was generated from part of bacterial clone contigs of human
chromosome 9, constructed by the Sanger Centre Chromosome 9 Mapping
Group.  Further information can be found at
http://www.sanger.ac.uk/HGP/Chr9
RP11-172F4 is from the library RPCI-11.1 constructed by the group
of Pieter de Jong. For further details see
http://www.chori.org/bacpac/home.htm
VECTOR: pBACe3.6
IMPORTANT: This sequence is not the entire insert of clone
RP11-172F4 It may be shorter because we sequence overlapping
sections only once, except for a 100 base overlap.
The true left end of clone RP11-172F4 is at 1 in this sequence. The
true left end of clone RP11-240L7 is at 139019 in this sequence.
The true right end of clone RP11-392G7 is at 43511 in this
sequence.

  TITLE     Direct Submission
  JOURNAL   Submitted (24-JUL-1998) The Institute for Genomic Research, 9712
            Medical Center Dr., Rockville, MD 20850, USA
COMMENT     On Jul 24, 1998 this sequence version replaced gi:3241936.
            Address all correspondence to: Mark Adams The Institute for Genomic
            Research 9712 Medical Center Dr, Rockville, MD 20850, USA e-mail
            address: humgen@tigr.org.   The orientation of the sequence is from
            SP6 end to T7 end. Genes were identified by a combination of five
            methods including: XGRAIL (available by anonymous ftp from
            arthur.epm.ornl.gov), Genefinder (Phil Green, University of
            Washington), Genscan  (Chris Burge,
            http://gnomic.stanford.edu/~chris/GENSCANW.html)searches of the
            complete sequence against a peptide database,and the Human gene
            Index database at TIGR (http://www.tigr.org/tdb/hgi/hgi.html).
            Genes without pepetide homolgy having spliced EST hits are termed
            'Unknown gene product'. Genes encoding tRNAs are predicted by
            tRNAscan-SE (Sean Eddy, http://genome.wustl.edu/eddy/tRNAscan-SE/).

            Summary Statistics
            Consensus quality: 148939 bases at least Q40
            Consensus quality: 156608 bases at least Q30
            Consensus quality: 158826 bases at least Q20
            Estimated insert size: 175000; agarose-fp estimation
            Estimated insert size: 160452; sum-of-contigs estimation
            Quality coverage:  7.26 in Q20 bases; agarose-fp estimation
            Quality coverage:  7.92 in Q20 bases; sum-of-contigs estimation.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 9 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *         1     3008: contig of 3008 bp in length
            *      3009     3108: gap of unknown length
            *      3109     9209: contig of 6101 bp in length

COMMENT     On Feb 17, 2002 this sequence version replaced gi:18158390.
            ---------- Genome Center
                Center: Washington University Genome Sequencing Center
                Center code: WUGSC
                Web site: http://genome.wustl.edu
                Contact: sapiens@watson.wustl.edu
            ---------- Summary Statistics
                Center project name: H_NH0374M07
            ----------.

            NOTICE:  This sequence may not represent the entire insert of this
            clone.  It may be shorter because we only sequence overlapping
            clone sections once, or longer because we provide a small overlap
            between neighboring data submissions.

            This sequence was finished as follows unless otherwise noted:
            all regions were double stranded, sequenced with an alternate
            chemistry, or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by sequence
            from more than one subclone; and the assembly was confirmed by
            restriction digest.

            MAPPING INFORMATION:
            The sequence of this clone was established as part of a mapping and
            sequencing collaboration between the NHGRI Chromosome 7 Mapping
            Project (Eric D. Green, Director), John D. McPherson in the
            Department of Genetics (Washington University), and the Washington
            University Genome Sequencing Center. For additional information
            about the map position of this sequence, see
            http://www.nhgri.nih.gov/DIR/GTB/CHR7 , send
            mailto:egreen@nhgri.nih.gov , or see http://genome.wustl.edu

            SOURCE INFORMATION:
            The RPCI-11 human BAC library was made from the blood of one male
            donor, as described by Osoegawa,K., Woon,P.Y., Zhao,B., Frengen,E.,
            Tateno,M., Catanese,J.J. and de Jong,P.J. (1998) An improved
            approach for construction of bacterial artificial chromosome
            libraries. Genomics 51:1-8. The clone may be obtained either from
            Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong
            and coworkers at http://www.chori.org
            VECTOR:  pBACe3.6.

            --------------
            During sequence assembly data is compared from overlapping clones.
            Where differences are found these are annotated as variations
            together with a note of the overlapping clone name. Note that the
            variation annotation may not be found in the sequence submission
            corresponding to the overlapping clone, as we submit sequences with
            only a small overlap as described above.
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one plasmid subclone or more than one M13 subclone; and the
            assembly was confirmed by restriction digest, except on the rare
            occasion of the clone being a YAC.
            The following abbreviations are used to associate primary accession
            numbers given in the feature table with their source databases:
            Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
            on the WORMPEP database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
            was generated from part of bacterial clone contigs of human
            chromosome X, constructed by the Sanger Centre Chromosome X Mapping
            Group.  Further information can be found at
            http://www.sanger.ac.uk/HGP/ChrX
            WI2-86554F10 is from a Whitehead human fosmid library VECTOR:

  TITLE     Direct Submission
  JOURNAL   Submitted (15-JUN-2002) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On Jun 13, 2002 this sequence version replaced gi:21392442.
            -------------- Genome Center
                Center: Baylor College of Medicine
                Center code: BCM
                Web site: http://www.hgsc.bcm.tmc.edu/
                Contact: hgsc-help@bcm.tmc.edu
            -------------- Project Information
                Center project name: ZUAK
                Center clone name: RP43-10G9
            -------------- Summary Statistics
                Sequencing vector: Plasmid; M77789
                Chemistry: Dye-terminator Big Dye: 100% of reads
                Assembly program: Phrap; version 0.990329
                Consensus quality: 241130 bases at least Q40
                Consensus quality: 243666 bases at least Q30
                Consensus quality: 245673 bases at least Q20
                Estimated insert size: 259407; sum-of-contigs estimation
                Quality coverage: 0x in Q20 bases; agarose-fp estimation
                Quality coverage: 7.4x in Q20 bases; sum-of-contigs estimation
            --------------
            * NOTE: Estimated insert size may differ from sequence length
            *   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html)
            * NOTE: This sequence may represent more than one clone.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 14 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1    55034: contig of 55034 bp in length
            *    55035    55134: gap of unknown length
            *    55135    92628: contig of 37494 bp in length
            *    92629    92728: gap of unknown length
            *    92729   119376: contig of 26648 bp in length
            *   119377   119476: gap of unknown length
            *   119477   142089: contig of 22613 bp in length
            *   142090   142189: gap of unknown length
            *   142190   165691: contig of 23502 bp in length
            *   165692   165791: gap of unknown length

COMMENT     On Jul 25, 2003 this sequence version replaced gi:24414279.
            -------------- Genome Center
                 Center: NIH Intramural Sequencing Center
                 Center code: NISC
                 Web site: http://www.nisc.nih.gov
                 Contact: nisc_zoo@nhgri.nih.gov
            -------------- Project Information
                 Center project name: cmz
                 Center clone name: 165N09

            The sequence data in this record represents an 'enhanced'
            version of a Phase 2 submission. Specifically, the indicated
            order and orientation of each sequence contig has been
            established using one or more of the following: read-pair
            data from individual subclones, overlaps with neighboring
            clones, alignment with available reference sequence (e.g.,
            human), and/or confirmation by PCR testing. In addition,
            the sequence assembly is based on at least 8X average
            coverage in Q20 bases and has been reviewed to rule out
            gross misassemblies, the low-quality ends of sequence
            contigs have been trimmed away, and each base is associated
            with a Phrap-derived quality score.
            -------------- Summary Statistics
                 Sequencing vector: plasmid; n/a; 100% of reads
                 Chemistry: Dye-terminator Big Dye; 100% of reads
                 Assembly program: Phrap; version 0.990319
                 Consensus quality: 167110 bases at least Q40
                 Consensus quality: 168559 bases at least Q30
                 Consensus quality: 169363 bases at least Q20
                 Insert size: 152000; agarose-fp
                 Insert size: 169746; sum-of-contigs
                 Quality coverage: 11.31x in Q20 bases; agarose-fp
                 Quality coverage: 10.13x in Q20 bases; sum-of-contigs
            --------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 10 contigs. Gaps between the contigs
            * are represented as runs of N. The order of the pieces
            * is believed to be correct as given, however the sizes
            * of the gaps between them are based on estimates that have
```

```
           * provided by the submittor.
           * This sequence will be replaced
           * by the finished sequence as soon as it is available and
           * the accession number will be preserved.
           *        1     6384: contig of 6384 bp in length
           *     6385     6484: gap of unknown length
           *     6485    37411: contig of 30927 bp in length

COMMENT     On Mar 10, 1997 this sequence version replaced gi:1772950.
            -------------- Genome Center
            Center: Wellcome Trust Sanger Institute
            Center code: SC
            Web site: http://www.sanger.ac.uk
            Contact: humquery@sanger.ac.uk
            --------------
            During sequence assembly data is compared from overlapping clones.
            Where differences are found these are annotated as variations
            together with a note of the overlapping clone name. Note that the
            variation annotation may not be found in the sequence submission
            corresponding to the overlapping clone, as we submit sequences with
            only a small overlap as described above.
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
```

```
          30); an attempt was made to resolve all sequencing problems, such
          as compressions and repeats; all regions were covered by at least
          one plasmid subclone or more than one M13 subclone; and the
          assembly was confirmed by restriction digest, except on the rare
          occasion of the clone being a YAC.
          The following abbreviations are used to associate primary accession
          numbers given in the feature table with their source databases:
          Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
          on the WORMPEP database can be found at
          http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
          was generated from part of bacterial clone contigs of human
          chromosome X, constructed by the Sanger Centre Chromosome X Mapping
          Group.  Further information can be found at
          http://www.sanger.ac.uk/HGP/ChrX
          RP3-323B6 is from the library RPCI-3 constructed by the group of
          Pieter de Jong. For further details see

            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On Dec 11, 2002 this sequence version replaced gi:19172705.
            ------------- Genome Center
                Center: Baylor College of Medicine
                Center code: BCM
                Web site: http://www.hgsc.bcm.tmc.edu/
                Drafting Center Code: BCM
                Contact: hgsc-help@bcm.tmc.edu
            ------------- Project Information
                Center project name: HDJU
                Center clone name: RP11-355N1
            ------------- Summary Statistics
                Sequencing vector: Plasmid;
                Chemistry: Dye-terminator Big Dye: 100% of reads
                Assembly program: Phrap; version 0.990329
                Consensus quality: 150350 bases at least Q40
                Consensus quality: 150698 bases at least Q30
                Consensus quality: 151119 bases at least Q20
                Estimated insert size: 144092; sum-of-contigs estimation
                Quality coverage: 14x in Q20 bases; sum-of-contigs estimation
            -------------
            * NOTE: Estimated insert size may differ from sequence length
            *   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 5 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *       1     2895: contig of 2895 bp in length
            *    2896     2995: gap of unknown length
            *    2996    16175: contig of 13180 bp in length
            *   16176    16275: gap of unknown length
            *   16276    56442: contig of 40167 bp in length
            *   56443    56542: gap of unknown length
            *   56543    99843: contig of 43301 bp in length
            *   99844    99943: gap of unknown length
            *   99944   153201: contig of 53258 bp in length.

COMMENT     On Jan 31, 2002 this sequence version replaced gi:17977520.
            INFORMATION: http://www.hgsc.bcm.tmc.edu/ or email
            gc-help@bcm.tmc.edu

            CLONE LENGTH: This sequence does not necessarily represent the
            entire insert of this clone. Overlapping regions of clones are only
            sequenced and submitted once, so the sequence for the remainder of
            the insert may be found in the record for the adjacent clones.
            Overlapping clones are noted at the beginning and end of the
            Features listing.

            ANNOTATION OF FEATURES:
               STSs are identified using ePCR (Genome Res. 7:541-550) searches
            of a local database that includes entries from dbSTS, GDB, and
            local mapping efforts.
               Repeats are identified using RepeatMasker (A. Smit and P. Green,
            unpublished.) for Human and Mouse sequences.
               Genes and Region of sequence similarity are identified by BLAST
            (Nuc. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to the
            EST and cDNA sequences. Genes demonstrate at least two exons
            flanked by consensus splice sites that maintained sequence
            continuity across the splice junctions. Sequences that are not
            identical matches are annotated as similar.

            SEQUENCING READ COVERAGE:Sequencing is completed to a minimum
```

standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality for a region does not meet this standard, it will be indicated in the annotation as Low Coverage.

QUALITY OF INDIVIDUAL BASES:This sequence meets stringent quality standards - estimated error rate less than 1 per 10,000 bases. Reports of lowest quality individual bases and measures of base quality are listed below. Description of the metrics can be found at URL:
http://gc.bcm.tmc.edu:8088/quality.info/genbank.annotation.html.

JOURNAL Submitted (21-FEB-2002) Department of Genetics, Washington University, 4444 Forest Park Avenue, St. Louis, Missouri 63108, USA
COMMENT On Aug 28, 2001 this sequence version replaced gi:15022788.
---------- Genome Center
Center: Washington University Genome Sequencing Center
Center code: WUGSC
Web site: http://genome.wustl.edu/gsc
Contact: sapiens@watson.wustl.edu
---------- Summary Statistics
Center project name: H_NH0774G05
----------.

NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.

MAPPING INFORMATION:
Mapping information for this clone was provided by Dr. John D. McPherson, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see http://genome.wustl.edu/gsc

SOURCE INFORMATION:
The RPCI-11 human BAC library was made from the blood of one male donor, as described by Osoegawa,K., Woon,P.Y., Zhao,B., Frengen,E., Tateno,M., Catanese,J.J. and de Jong,P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8. The clone may be obtained either from Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong and coworkers at http://www.chori.org
VECTOR: pBACe3.6

NEIGHBORING SEQUENCE INFORMATION:
The clone sequenced to the left is AC079084. Actual start of this clone is at base position 1 of RP11-774G5; actual end is at base position 217985 of RP11-774G5.

            --------------
            During sequence assembly data is compared from overlapping clones.
            Where differences are found these are annotated as variations
            together with a note of the overlapping clone name. Note that the
            variation annotation may not be found in the sequence submission
            corresponding to the overlapping clone, as we submit sequences with
            only a small overlap as described above.
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one plasmid subclone or more than one M13 subclone; and the
            assembly was confirmed by restriction digest, except on the rare
            occasion of the clone being a YAC.
            The following abbreviations are used to associate primary accession
            numbers given in the feature table with their source databases:
            Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
            on the WORMPEP database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
            was generated from part of bacterial clone contigs of human
            chromosome X, constructed by the Sanger Centre Chromosome X Mapping
            Group.  Further information can be found at
            http://www.sanger.ac.uk/HGP/ChrX
            RP6-141H5 is from the library RPCI-6 constructed by the group of
            Pieter de Jong. For further details see
            http://www.chori.org/bacpac/home.htm
            VECTOR: pPAC4
            This sequence is the entire insert of clone RP6-141H5.

            coverage: 2.51x in Q20 bases; agarose-fp
            --------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 26 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
```

```
            * as soon as it is available and the accession number will
            * be preserved.

            --------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 17 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.

            ---------- Summary Statistics  ----------
            Sequencing vector: M13; 100%
            Sequencing vector: plasmid; 0%
            Chemistry: Dye-primer ET; 97% of reads
            Chemistry: Dye-terminator Big Dye; 3% of reads
            Assembly program: Phrap; version 0.990319
            Consensus quality: 141584 bases at least Q40
            Consensus quality: 144367 bases at least Q30
            Consensus quality: 145803 bases at least Q20
            Insert size: 150000; agarose-fp
            Insert size: 148369; sum-of-contigs
            Quality coverage: 3.76 in Q20 bases; agarose-fp
            Quality coverage: 4.04 in Q20 bases; sum-of-contigs
            ------------------------------------------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 17 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *       1     1731: contig of 1731 bp in length

            -------------- Project Information
            Center project name: zK205B10
            -------------- Summary Statistics
            Assembly program: XGAP4; version 4.5
            Chemistry: Dye-terminator; 100% of reads
            Consensus quality: 149837 bases at least Q40
            Consensus quality: 150168 bases at least Q30
            Consensus quality: 150366 bases at least Q20
            Insert size: 150647; sum-of-contigs
            Insert size: 157117; 1.3% error; agarose-fp
            Quality coverage: 8.56x in Q20 bases; sum-of-contigs Quality
            coverage: 8.40x in Q20 bases; agarose-fp
            --------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 5 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *       1    21342: contig of 21342 bp in length
            *   21343    21442: gap of 100 bp
            *   21443    23542: contig of 2100 bp in length
            *   23543    23642: gap of 100 bp
            *   23643    56824: contig of 33182 bp in length
            *   56825    56924: gap of 100 bp
            *   56925   140273: contig of 83349 bp in length
            *  140274   140373: gap of 100 bp
            *  140374   151047: contig of 10674 bp in length.

  TITLE     Direct Submission
  JOURNAL   Submitted (16-MAY-2001) Sanger Centre, Hinxton, Cambridgeshire,
            CB10 1SA, UK. E-mail enquiries: humquery@sanger.ac.uk Clone
            requests: clonerequest@sanger.ac.uk
COMMENT     On Apr 27, 2001 this sequence version replaced gi:13752046.
            During sequence assembly data is compared from overlapping clones.
            Where differences are found these are annotated as variations
            together with a note of the overlapping clone name. Note that the
            variation annotation may not be found in the sequence submission
            corresponding to the overlapping clone, as we submit sequences with
            only a small overlap as described above.
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one plasmid subclone or more than one M13 subclone; and the
            assembly was confirmed by restriction digest. The following
            abbreviations are used to associate primary accession numbers given
            in the feature table with their source databases: Em:, EMBL; Sw:,
            SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP
            database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
            was generated from part of bacterial clone contigs of human
            chromosome 9, constructed by the Sanger Centre Chromosome 9 Mapping
            Group.  Further information can be found at
            http://www.sanger.ac.uk/HGP/Chr9
            RP11-373O10 is from the library RPCI-11.2 constructed by the group
            of Pieter de Jong. For further details see
            http://www.chori.org/bacpac/home.htm
            VECTOR: pBACe3.6
            This sequence is the entire insert of clone RP11-373O10 The true
            left end of clone RP11-82L2 is at 128987 in this sequence. The true
            right end of clone RP11-346G21 is at 9227 in this sequence.

            ---------- Project Information
            Center project name: zK192K11
            ---------- Summary Statistics
            Assembly program: XGAP4; version 4.5
            Chemistry: Dye-terminator; 100% of reads
            Consensus quality: 247462 bases at least Q40
            Consensus quality: 248434 bases at least Q30
            Consensus quality: 249070 bases at least Q20
            Insert size: 251650; sum-of-contigs
            Insert size: 239884; 3.5% error; agarose-fp
            Quality coverage: 10.19x in Q20 bases; sum-of-contigs Quality
            coverage: 10.69x in Q20 bases; agarose-fp
            ----------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 9 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1     5351: contig of 5351 bp in length
            *     5352     5451: gap of 100 bp
            *     5452    19343: contig of 13892 bp in length
            *    19344    19443: gap of 100 bp
            *    19444    58067: contig of 38624 bp in length
            *    58068    58167: gap of 100 bp
            *    58168    75897: contig of 17730 bp in length
            *    75898    75997: gap of 100 bp

          coverage: 8.63x in Q20 bases; agarose-fp
          --------------.
          * NOTE: This is a 'working draft' sequence. It currently
          * consists of 10 contigs. The true order of the pieces
          * is not known and their order in this sequence record is
          * arbitrary. Gaps between the contigs are represented as
          * runs of N, but the exact sizes of the gaps are unknown.
          * This record will be updated with the finished sequence
          * as soon as it is available and the accession number will
          * be preserved.
          *      1     4775: contig of 4775 bp in length

            Web site: http://www.jgi.doe.gov
            -------
            Project Information
            Center Project Name: 543473
            Center clone name: RPCI-11_357A20
            -------
            Summary Statistics
            Consensus quality: 164710 bases at least Q40
            Consensus quality: 164791 bases at least Q30
            Consensus quality: 164821 bases at least Q20
            Estimated insert size: 175000; agarose-fp estimation
            Estimated insert size: 164894; sum-of-contigs estimation
            Quality coverage:  8.51 in Q20 bases; agarose-fp estimation
            Quality coverage:  9.03 in Q20 bases; sum-of-contigs estimation.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 2 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *       1    66545: contig of 66545 bp in length
            *   66546    66645: gap of unknown length
            *   66646   164994: contig of 98349 bp in length.

          coverage: 6.34x in Q20 bases; agarose-fp
          --------------.
          * NOTE: This is a 'working draft' sequence. It currently
          * consists of 11 contigs. The true order of the pieces
          * is not known and their order in this sequence record is
          * arbitrary. Gaps between the contigs are represented as
          * runs of N, but the exact sizes of the gaps are unknown.
          * This record will be updated with the finished sequence
          * as soon as it is available and the accession number will
          * be preserved.
          *        1     5680: contig of 5680 bp in length
          *     5681     5780: gap of 100 bp
          *     5781    34320: contig of 28540 bp in length

COMMENT     On Jun 21, 2002 this sequence version replaced gi:21065395.
            Draft Sequence Produced by Genome Therapeutics Corp, 100 Beaver
            Street, Waltham, MA 02453, USA
            http://www.genomecorp.com
            During sequence assembly data is compared from overlapping clones.
            Where differences are found these are annotated as variations
            together with a note of the overlapping clone name. Note that the
            variation annotation may not be found in the sequence submission
            corresponding to the overlapping clone, as we submit sequences with
            only a small overlap as described above.
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one plasmid subclone or more than one M13 subclone; and the
            assembly was confirmed by restriction digest. The following
            abbreviations are used to associate primary accession numbers given
            in the feature table with their source databases: Em:, EMBL; Sw:,
            SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP
            database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
            was generated from part of bacterial clone contigs of human
            chromosome 10, constructed by the Sanger Centre Chromosome 10
            Mapping Group.  Further information can be found at
            http://www.sanger.ac.uk/HGP/Chr10
            RP11-472K8 is from the library RPCI-11.2 constructed by the group
            of Pieter de Jong. For further details see
            http://www.chori.org/bacpac/home.htm
            VECTOR: pBACe3.6.

            Insert size: 204129; 3.5% error; agarose-fp
            Quality coverage: 11.12x in Q20 bases; sum-of-contigs Quality
            coverage: 11.09x in Q20 bases; agarose-fp
            --------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 11 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1    10267: contig of 10267 bp in length
            *    10268    10367: gap of 100 bp
            *    10368    14914: contig of 4547 bp in length
            *    14915    15014: gap of 100 bp
            *    15015    25928: contig of 10914 bp in length
            *    25929    26028: gap of 100 bp
            *    26029    68196: contig of 42168 bp in length
            *    68197    68296: gap of 100 bp
            *    68297   108045: contig of 39749 bp in length
            *   108046   108145: gap of 100 bp
            *   108146   114266: contig of 6121 bp in length
            *   114267   114366: gap of 100 bp
            *   114367   118079: contig of 3713 bp in length
            *   118080   118179: gap of 100 bp
            *   118180   139935: contig of 21756 bp in length
            *   139936   140035: gap of 100 bp
            *   140036   151139: contig of 11104 bp in length
            *   151140   151239: gap of 100 bp
            *   151240   189955: contig of 38716 bp in length
            *   189956   190055: gap of 100 bp
            *   190056   204486: contig of 14431 bp in length.
